WO 2007/033265 A1

(54) Title: DIPEPTIDYL PEPTIDASE INHIBITORS FOR TREATING DIABETIS

(57) Abstract: Pharmaceutical compositions comprising 2-[[2-[(3*R*)-3-Amino-piperidinyl)-5-fluoro-6-oxo-6*H*-pyrimidinyl]methyl]-benzonitrile and pharmaceutically acceptable salts thereof are provided as well as kits and articles of manufacture comprising the pharmaceutical compositions as well as methods of using the pharmaceutical compositions.

ADMINISTRATION OF DIPEPTIDYL PEPTIDASE INHIBITORS

FIELD OF THE INVENTION

[0001] The invention relates to the method of administering compounds used to inhibit dipeptidyl peptidase IV as well as treatment methods based on such administration.

DESCRIPTION OF RELATED ART

[0002] Dipeptidyl Peptidase IV (IUBMB Enzyme Nomenclature EC.3.4.14.5) is a type II membrane protein that has been referred to in the literature by a wide a variety of names including DPP4, DP4, DAP-IV, FAPβ, adenosine deaminase complexing protein 2, adenosine deaminase binding protein (ADAbp), dipeptidyl aminopeptidase IV; Xaa-Pro-dipeptidyl-aminopeptidase; Gly-Pro naphthylamidase; postproline dipeptidyl aminopeptidase IV; lymphocyte antigen CD26; glycoprotein GP110; dipeptidyl peptidase IV; glycylproline aminopeptidase; glycylproline aminopeptidase; X-prolyl dipeptidyl aminopeptidase; pep X; leukocyte antigen CD26; glycylprolyl dipeptidylaminopeptidase; dipeptidyl-peptide hydrolase; glycylprolyl aminopeptidase; dipeptidyl-aminopeptidase IV; DPP IV/CD26; amino acyl-prolyl dipeptidyl aminopeptidase; T cell triggering molecule Tp103; X-PDAP. Dipeptidyl Peptidase IV is referred to herein as "DPP-IV."

[0003] DPP-IV is a non-classical serine aminodipeptidase that removes Xaa-Pro dipeptides from the amino terminus (N-terminus) of polypeptides and proteins. DPP-IV dependent slow release of dipeptides of the type X-Gly or X-Ser has also been reported for some naturally occurring peptides.

[0004] DPP-IV is constitutively expressed on epithelial and endothelial cells of a variety of different tissues (intestine, liver, lung, kidney and placenta), and is also found in body fluids. DPP-IV is also expressed on circulating T-lymphocytes and has been shown to be synonymous with the cell-surface antigen, CD-26.

[0005] DPP-IV is responsible for the metabolic cleavage of certain endogenous peptides (GLP-1 (7-36), glucagon) *in vivo* and has demonstrated proteolytic activity against a variety of other peptides (GHRH, NPY, GLP-2, VIP) *in vitro*.

[0006] GLP-1 (7-36) is a 29 amino-acid peptide derived by post-translational processing of proglucagon in the small intestine. GLP-1 (7-36) has multiple actions *in vivo* including the stimulation of insulin secretion, inhibition of glucagon secretion, the

promotion of satiety, and the slowing of gastric emptying. Based on its physiological profile, the actions of GLP-1 (7-36) are believed to be beneficial in the prevention and treatment of type II diabetes and potentially obesity. For example, exogenous administration of GLP-1 (7-36) (continuous infusion) in diabetic patients has been found to be efficacious in this patient population. Unfortunately, GLP-1 (7-36) is degraded rapidly *in vivo* and has been shown to have a short half-life *in vivo* ($t_{1/2}$=1.5 minutes).

[0007] Based on a study of genetically bred DPP-IV knock out mice and on *in vivo* / *in vitro* studies with selective DPP-IV inhibitors, DPP-IV has been shown to be the primary degrading enzyme of GLP-1 (7-36) *in vivo*. GLP-1 (7-36) is degraded by DPP-IV efficiently to GLP-1 (9-36), which has been speculated to act as a physiological antagonist to GLP-1 (7-36). Inhibiting DPP-IV *in vivo* is therefore believed to be useful for potentiating endogenous levels of GLP-1 (7-36) and attenuating the formation of its antagonist GLP-1 (9-36). Thus, DPP-IV inhibitors are believed to be useful agents for the prevention, delay of progression, and/or treatment of conditions mediated by DPP-IV, in particular diabetes and more particularly, type 2 diabetes mellitus, diabetic dislipidemia, conditions of impaired glucose tolerance (IGT), conditions of impaired fasting plasma glucose (IFG), metabolic acidosis, ketosis, appetite regulation and obesity.

[0008] Several compounds have been shown to inhibit DPP-IV. Nonetheless, a need still exists for new DPP-IV inhibitors and methods of administering such inhibitors for the treatment of disease.

SUMMARY OF THE INVENTION

[0009] A method is provided comprising: administering a daily dose of between 5 mg/day and 300 mg/day of Compound I to a patient, optionally between 10 mg and 250 mg of Compound I, optionally between 20 mg and 200 mg of Compound I, and optionally between 25 mg and 200 mg of Compound I. In one variation, a daily dose of 12.5 mg, 25 mg, 50 mg, 75 mg, 100 mg or 150 mg of Compound I is administered.

[0010] In one variation, administering is performed 1 time per day and may optionally be performed 1 time per day as a single dosage. Optionally, administering is performed 1 time per day for a period of at least 30 days and optionally for a period of at least 60 days.

[0011] In one variation, administering is performed 1 time per day in the morning and optionally is performed 1 time per day in the morning prior to a first meal of the day for the patient.

[0012] Administering may be performed by a wide range of routes of administration including, but not limited to a route selected from the group consisting of orally, parenterally, intraperitoneally, intravenously, intraarterially, transdermally, sublingually, intramuscularly, rectally, transbuccally, intranasally, liposomally, via inhalation, vaginally, intraoccularly, via local delivery, subcutaneously, intraadiposally, intraarticularly, intraperitoneally and intrathecally. In one particular variation, administering is performed orally.

[0013] Compound I may be used to treat a range of diseases. In one variation, administering Compound I is performed to treat type I or type II diabetes disease state of the patient. In another variation, administering Compound I is performed to treat a pre-diabetic patient. In still another variation, administering Compound I is performed to treat an inflammatory bowel disease, Crohn's disease, chemotherapy-induced enteritis, oral mucositis or Shortened Bowel syndrome.

[0014] In another variation, administering Compound I is performed to treat a patient suffering from conditions mediated by DPP-IV such as diabetes and more particularly, type 2 diabetes mellitus; diabetic dislipidemia; impaired glucose tolerance (IGT); impaired fasting plasma glucose (IFG); metabolic acidosis; ketosis; appetite regulation; obesity; complications associated with diabetes including diabetic neuropathy, diabetic retinopathy and kidney disease; hyperlipidemia including hypertriglyceridemia, hypercholesteremia, hypoHDLemia and postprandial hyperlipidemia; arteriosclerosis; hypertension; myocardial infarction, angina pectoris, cerebral infarction, cerebral apoplexy and metabolic syndrome.

[0015] A method is also provided for administering Compound I in combination with one or more antidiabetic compounds other than Compound I. In one variation, such combination therapy method is performed where a daily dose of between 5 mg/day and 300 mg/day of Compound I to a patient, optionally between 10 mg and 250 mg of Compound I, optionally between 20 mg and 200 mg of Compound I, and optionally between 25 mg and 200 mg of Compound I. In one variation, a daily dose of 12.5 mg, 25

mg, 50 mg, 75 mg, 100 mg or 150 mg of Compound I is administered to a patient in combination with one or more antidiabetic compounds other than Compound I.

[0016] It is noted that several different dosage ranges for particular antidiabetic compounds are provided herein. It is intended for the scope of the present invention to include drug combinations covering any of the disclosed ranges for Compound I in combination with any of the dosage ranges described herein for other antidiabetic compounds.

[0017] Combination of Compound I with one or more antidiabetic compounds other than Compound I provides excellent effects such as 1) enhancement in therapeutic effects of Compound I and/or the antidiabetic compounds; 2) reduction in side effects of Compound I and/or the antidiabetic compounds; and 3) reduction in a dose of Compound I and/or the antidiabetic compounds.

[0018] The one or more antidiabetic compounds administered in combination with Compound I may optionally be selected from the group consisting of insulin signaling pathway modulators, compounds influencing a dysregulated hepatic glucose production, insulin sensitivity enhancers, and insulin secretion enhancers.

[0019] The one or more antidiabetic compounds administered in combination with Compound I may also optionally be selected from the group consisting of protein tyrosine phosphatase inhibitors, glutamine-fructose-6-phosphate amidotransferase inhibitors, glucose-6-phosphatase inhibitors, fructose-1,6-bisphosphatase inhibitors, glycogen phosphorylase inhibitors, glucagon receptor antagonists, phosphoenolpyruvate carboxykinase inhibitors, pyruvate dehydrogenase kinase inhibitors, alpha-glucosidase inhibitors, inhibitors of gastric emptying, glucokinase activators, GLP-1 receptor agonists, GLP-2 receptor agonists, UCP modulators, RXR modulators, GSK-3 inhibitors, PPAR modulators, metformin, insulin, and α_2-adrenergic antagonists.

[0020] The one or more antidiabetic compounds administered in combination with Compound I may also optionally be selected from the group consisting of GSK-3 inhibitors, retinoid X receptor agonists, Beta-3 AR agonists, UCP modulators, antidiabetic thiazolidinediones, non-glitazone type PPAR gamma agonists, dual PPAR gamma/PPAR alpha agonists, antidiabetic vanadium containing compounds and biguanides.

[0021] The one or more antidiabetic compounds administered in combination with Compound I may also optionally be thiazolidinediones selected from the group consisting of (S)-((3,4-dihydro-2-(phenyl-methyl)-2H-1-benzopyran-6-yl)methyl-thiazolidine-2,4-dione, 5-{[4-(3-(5-methyl-2-phenyl-4-oxazolyl)-1-oxo-propyl)-phenyl]-methyl}-thiazolidine-2,4-dione, 5-{[4-(1-methyl-cyclohexyl)methoxy)-phenyl]methyl]-thiazolidine-2,4-dione, 5-{[4-(2-(1-indolyl)ethoxy)phenyl]methyl}-thiazolidine-2,4-dione, 5-{4-[2-(5-methyl-2-phenyl-4-oxazoly)-ethoxy)]benzyl}-thiazolidine-2,4-dione, 5-(2-naphthylsulfonyl)-thiazolidine-2,4-dione, bis{4-[(2,4-dioxo-5-thiazolidinyl)-methyl]phenyl}methane, 5-{4-[2-(5-methyl-2-phenyl-4-oxazolyl)-2-hydroxyethoxy]-benzyl}- -thiazolidine-2,4-dione, 5-[4-(1-phenyl-1-cyclopropanecarbonylamino)-benzyl]-thiazolidine-2,4-dione, 5-{[4-(2-(2,3-dihydroindol-1-yl)ethoxy)phenylmethyl)-thiazolidine-2,4-dione, 5-[3-(4-chloro-phenyl])-2-- propynyl]-5-phenylsulfonyl)thiazolidine-2,4-dione, 5-[3-(4-chlorophenyl])-- 2-propynyl]-5-(4-fluorophenyl-sulfonyl)thiazolidine-2,4-dione,5-{[4-(2-(methyl-2-pyridinyl-amino)-ethoxy)phenyl]methyl}-thiazolidine-2,4-dione, 5-{[4-(2-(5-ethyl-2-pyridyl)ethoxy)phenyl]-methyl}-thiazolidine-2,4-dione, 5-{[4-((3,4-dihydro-6-hydroxy-2,5,7,8-tetramethyl-2H-1-benzopyran-2-yl)methoxy)-phenyl]-methyl)-thiazolidine-2,4-dione, 5-[6-(2-fluoro-benzyloxy)-naphthalen-2-ylmethyl]-thiazolidine-2,4-dione, 5-([2-(2-naphthyl)-benzoxazol-5-yl]-methyl}thiazolidine-2,4-dione and 5-(2,4-dioxothiazolidin-5-ylmethyl)-2-methoxy-N-(4-trifluoromethyl-benzyl)benzamide, including any pharmaceutically acceptable salts thereof.

[0022] In one variation, the one or more antidiabetic compounds administered in combination with Compound I includes metformin. In one particular variation, the metformin in this combination comprises one or more pharmaceutically acceptable salts thereof. In another particular variation, the metformin in this combination comprises a metformin HCl salt. In still another particular variation, the metformin in this combination is administered in a daily dose of between 125 and 2550 mg. In yet another variation, the metformin in this combination is administered in a daily dose of between 250 and 2550 mg.

[0023] In another variation, the one or more antidiabetic compounds administered in combination with Compound I includes one or more sulphonyl urea derivatives.

[0024] The one or more antidiabetic compounds administered in combination with Compound I may also optionally be selected from the group consisting of glisoxepid, glyburide, glibenclamide, acetohexamide, chloropropamide, glibornuride, tolbutamide, tolazamide, glipizide, carbutamide, gliquidone, glyhexamide, phenbutamide, tolcyclamide, glimepiride and gliclazide, including any pharmaceutically acceptable salts thereof. In one variation, the one or more antidiabetic compounds administered in combination with Compound I includes glimepiride.

[0025] The one or more antidiabetic compounds administered in combination with Compound I may also optionally be selected from the group consisting of incretin hormones or mimics thereof, beta-cell imidazoline receptor antagonists, and short-acting insulin secretagogues.

[0026] In another variation, the one or more antidiabetic compounds administered in combination with Compound I includes insulin.

[0027] The one or more antidiabetic compounds administered in combination with Compound I may also optionally be one or more GLP-1 agonists including, for example, extendatide.

[0028] The one or more antidiabetic compounds administered in combination with Compound I may also optionally be one or more GLP-2 agonists including, for example, human recombinant GLP-2.

[0029] The one or more antidiabetic compounds administered in combination with Compound I may also optionally be one or more antidiabetic D-phenylalanine derivatives.

[0030] The one or more antidiabetic compounds administered in combination with Compound I may also optionally be selected from the group consisting of repaglinide and nateglinide, including any pharmaceutically acceptable salts thereof. In one variation, the one or more antidiabetic compounds administered in combination with Compound I includes mitiglinide calcium salt hydrate.

[0031] The one or more antidiabetic compounds administered in combination with Compound I may also optionally be one or more alpha-Glucosidase inhibitors.

[0032] The one or more antidiabetic compounds administered in combination with Compound I may also optionally be selected from the group consisting of acarbose, voglibose and miglitol, including any pharmaceutically acceptable salts thereof. In one

variation, the one or more antidiabetic compounds administered in combination with Compound I includes voglibose. In another variation, the voglibose in this combination is administered in a daily dose of between 0.1 and 1 mg.

[0033] The one or more antidiabetic compounds administered in combination with Compound I may also optionally be rosiglitazone, including any pharmaceutically acceptable salts thereof. In one variation, the rosiglitazone in this combination comprises a rosiglitazone maleate salt.

[0034] The one or more antidiabetic compounds administered in combination with Compound I may also optionally be tesaglitazar, muraglitazar or naveglitazar, including any pharmaceutically acceptable salts thereof.

[0035] The one or more antidiabetic compounds administered in combination with Compound I may also optionally be pioglitazone, including any pharmaceutically acceptable salts thereof. In one variation, the pioglitazone in this combination comprises a pioglitazone HCl salt. In another variation, the pioglitazone in this combination is administered in a daily dose of between 7.5 and 60 mg. In still another variation, the pioglitazone in this combination is administered in a daily dose of between 15 and 45 mg.

[0036] The one or more antidiabetic compounds administered in combination with Compound I may also optionally comprise metformin and pioglitazone. In one variation, the pioglitazone in this combination comprises one or more pharmaceutically acceptable salts thereof. In another variation, the pioglitazone in this combination comprises a pioglitazone HCl salt. In still another variation, the pioglitazone in this combination is administered in a daily dose of between 7.5 and 60 mg. In yet another variation, the pioglitazone in this combination is administered in a daily dose of between 15 and 45 mg. In another variation of each of the above variations, the metformin in this combination comprises one or more pharmaceutically acceptable salts thereof. In one particular variation, the metformin in this combination comprises a metformin HCl salt. In another particular variation, the metformin in this combination is administered in a daily dose of between 125 and 2550 mg. In still another variation, the metformin in this combination is administered in a daily dose of between 250 and 2550 mg.

[0037] In regard to each of the above embodiments and variations thereof, Compound I may be administered as a free base or as a pharmaceutically acceptable salt thereof. In

particular variations, Compound I is administered as a hydrochloride salt or a tartrate salt of Compound I.

[0038] Pharmaceutical compositions are also provided.

[0039] In one embodiment, a pharmaceutical composition is provided that is formulated in a single dose form wherein such single dose form comprises between 5 mg/day and 300 mg/day of Compound I, optionally between 10 mg and 250 mg of Compound I, optionally between 20 mg and 200 mg of Compound I, and optionally between 25 mg and 200 mg of Compound I. In particular variations, the pharmaceutical composition comprises 12.5 mg, 25 mg, 50 mg, 75 mg, 100 mg or 150 mg of Compound I.

[0040] In another embodiment, a pharmaceutical composition is provided that comprises Compound I and one or more antidiabetic compounds other than Compound I in a single dose form. Optionally, Compound I is present in the single dose form in a dosage amount between 5 mg/day and 300 mg/day of Compound I, optionally between 10 mg and 250 mg of Compound I, optionally between 20 mg and 200 mg of Compound I, and optionally between 25 mg and 200 mg of Compound I. In particular variations, the pharmaceutical composition comprises 12.5 mg, 25 mg, 50 mg, 75 mg, 100 mg or 150 mg of Compound I.

[0041] Combination of Compound I with one or more antidiabetic compounds other than Compound I provides excellent effects such as 1) enhancement in therapeutic effects of Compound I and/or the antidiabetic compounds; 2) reduction in side effects of Compound I and/or the antidiabetic compounds; and 3) reduction in a dose of Compound I and/or the antidiabetic compounds.

[0042] According to above embodiment, the one or more antidiabetic compounds comprised in the pharmaceutical composition may optionally be selected from the group consisting of insulin signaling pathway modulators, compounds influencing a dysregulated hepatic glucose production, insulin sensitivity enhancers, and insulin secretion enhancers.

[0043] Also according to above embodiment, the one or more antidiabetic compounds comprised in the pharmaceutical composition may optionally be selected from the group consisting of protein tyrosine phosphatase inhibitors, glutamine-fructose-6-phosphate amidotransferase inhibitors, glucose-6-phosphatase inhibitors, fructose-1,6-bisphosphatase inhibitors, glycogen phosphorylase inhibitors, glucagon receptor antagonists,

phosphoenolpyruvate carboxykinase inhibitors, pyruvate dehydrogenase kinase inhibitors, alpha-glucosidase inhibitors, inhibitors of gastric emptying, glucokinase activators, GLP-1 receptor agonists, GLP-2 receptor agonists, UCP modulators, RXR modulators, GSK-3 inhibitors, PPAR modulators, metformin, insulin, and α_2-adrenergic antagonists.

[0044] Also according to above embodiment, the one or more antidiabetic compounds comprised in the pharmaceutical composition may optionally be selected from the group consisting of GSK-3 inhibitors, retinoid X receptor agonists, Beta-3 AR agonists, UCP modulators, antidiabetic thiazolidinediones, non-glitazone type PPAR gamma agonists, dual PPAR gamma/PPAR alpha agonists, antidiabetic vanadium containing compounds and biguanides.

[0045] Also according to above embodiment, the one or more antidiabetic compounds comprised in the pharmaceutical composition may optionally be thiazolidinediones selected from the group consisting of (S)-((3,4-dihydro-2-(phenyl-methyl)-2H-1-benzopyran-6-yl)methyl-thiazolidine-2,4-dione, 5-{[4-(3-(5-methyl-2-phenyl-4-oxazolyl)-1-oxo-propyl)-phenyl]-methyl}-thiazolidine-2,4-dione, 5-{[4-(1-methyl-cyclohexyl)methoxy)-phenyl]methyl]-thiazolidine-2,4-dione, 5-{[4-(2-(1-indolyl)ethoxy)phenyl]methyl}-thiazolidine-2,4-dione, 5-{4-[2-(5-methyl-2-phenyl-4-oxazoly)-ethoxy)]benzyl}-thiazolidine-2,4-dione, 5-(2-naphthylsulfonyl)-thiazolidine-2,4-dione, bis{4-[(2,4-dioxo-5-thiazolidinyl)-methyl]phenyl}methane, 5-{4-[2-(5-methyl-2-phenyl-4-oxazolyl)-2-hydroxyethoxy]-benzyl}- -thiazolidine-2,4-dione, 5-[4-(1-phenyl-1-cyclopropanecarbonylamino)-benzyl]-thiazolidine-2,4-dione, 5-{[4-(2-(2,3-dihydroindol-1-yl)ethoxy)phenylmethyl)-thiazolidine-2,4-dione, 5-[3-(4-chloro-phenyl])-2-- propynyl]-5-phenylsulfonyl)thiazolidine-2,4-dione, 5-[3-(4-chlorophenyl])-- 2-propynyl]-5-(4-fluorophenyl-sulfonyl)thiazolidine-2,4-dione,5-{[4-(2-(methyl-2-pyridinyl-amino)-ethoxy)phenyl]methyl}-thiazolidine-2,4-dione, 5-{[4-(2-(5-ethyl-2-pyridyl)ethoxy)phenyl]-methyl}-thiazolidine-2,4-dione, 5-{[4-((3,4-dihydro-6-hydroxy-2,5,7,8-tetramethyl-2H-1-benzopyran-2-yl)methoxy)-phenyl]-methyl)-thiazolidine-2,4-dione, 5-[6-(2-fluoro-benzyloxy)-naphthalen-2-ylmethyl]-thiazolidine-2,4-dione, 5-([2-(2-naphthyl)-benzoxazol-5-yl]-methyl}thiazolidine-2,4-dione and 5-(2,4-dioxothiazolidin-5-ylmethyl)-2-methoxy-N-(4-trifluoromethyl-benzyl)benzamide, including any pharmaceutically acceptable salts thereof.

[0046] In one variation, the one or more antidiabetic compounds comprised in the pharmaceutical composition includes metformin. In one particular variation, the metformin in this combination comprises one or more pharmaceutically acceptable salts thereof. In another particular variation, the metformin in this combination comprises a metformin HCl salt. In still another particular variation, the metformin in this combination is administered in a daily dose of between 125 and 2550 mg. In yet another variation, the metformin in this combination is administered in a daily dose of between 250 and 2550 mg.

[0047] In another variation, the one or more antidiabetic compounds comprised in the pharmaceutical composition includes one or more sulphonyl urea derivatives.

[0048] In another variation, the one or more antidiabetic compounds comprised in the pharmaceutical composition includes an antidiabetic compound selected from the group consisting of glisoxepid, glyburide, glibenclamide, acetohexamide, chloropropamide, glibornuride, tolbutamide, tolazamide, glipizide, carbutamide, gliquidone, glyhexamide, phenbutamide, tolcyclamide, glimepiride and gliclazide, including any pharmaceutically acceptable salts thereof. In one variation, the one or more antidiabetic compounds comprised in the pharmaceutical composition includes glimepiride.

[0049] In another variation, the one or more antidiabetic compounds comprised in the pharmaceutical composition includes an antidiabetic compound selected from the group consisting of incretin hormones or mimics thereof, beta-cell imidazoline receptor antagonists, and short-acting insulin secretagogues.

[0050] In another variation, the one or more antidiabetic compounds comprised in the pharmaceutical composition includes insulin.

[0051] In another variation, the one or more antidiabetic compounds comprised in the pharmaceutical composition includes one or more GLP-1 agonists.

[0052] In another variation, the one or more antidiabetic compounds comprised in the pharmaceutical composition includes one or more GLP-2 agonists, including human recombinant forms of GLP-2.

[0053] In another variation, the one or more antidiabetic compounds comprised in the pharmaceutical composition includes one or more antidiabetic D-phenylalanine derivatives.

[0054] In another variation, the one or more antidiabetic compounds comprised in the pharmaceutical composition includes an antidiabetic compound selected from the group consisting of repaglinide and nateglinide, including any pharmaceutically acceptable salts thereof. In one variation, the one or more antidiabetic compounds comprised in the pharmaceutical composition includes mitiglinide calcium salt hydrate.

[0055] In another variation, the one or more antidiabetic compounds comprised in the pharmaceutical composition includes one or more alpha-Glucosidase inhibitors.

[0056] In another variation, the one or more antidiabetic compounds comprised in the pharmaceutical composition includes an antidiabetic compound selected from the group consisting of acarbose, voglibose and miglitol, including any pharmaceutically acceptable salts thereof. In one variation, the one or more antidiabetic compounds comprised in the pharmaceutical composition includes voglibose. In another variation, the voglibose in this combination is administered in a daily dose of between 0.1 and 1 mg.

[0057] In another variation, the one or more antidiabetic compounds comprised in the pharmaceutical composition includes rosiglitazone, including any pharmaceutically acceptable salts thereof. In one variation, the rosiglitazone in this combination comprises a rosiglitazone maleate salt.

[0058] The one or more antidiabetic compounds comprised in the pharmaceutical composition may also optionally be tesaglitazar, muraglitazar or naveglitazar, including any pharmaceutically acceptable salts thereof.

[0059] In another variation, the one or more antidiabetic compounds comprised in the pharmaceutical composition includes pioglitazone, including any pharmaceutically acceptable salts thereof. In one particular variation, the pioglitazone in this combination comprises a pioglitazone HCl salt. In another particular variation, the pioglitazone in this combination is administered in a daily dose of between 7.5 and 60 mg. In still another particular variation, the pioglitazone in this combination is administered in a daily dose of between 15 and 45 mg.

[0060] In another variation, the one or more antidiabetic compounds comprised in the pharmaceutical composition includes metformin and pioglitazone. In one particular variation, the pioglitazone in this combination comprises one or more pharmaceutically acceptable salts thereof. In another particular variation, the pioglitazone in this

combination comprises a pioglitazone HCl salt. In still another particular variation, the pioglitazone in this combination is administered in a daily dose of between 7.5 and 60 mg. In yet another particular variation, the pioglitazone in this combination is administered in a daily dose of between 15 and 45 mg. In a further variation of each of the above variations, the metformin in this combination comprises one or more pharmaceutically acceptable salts thereof. In still a further variation, the metformin in this combination comprises a metformin HCl salt. In yet a further variation, the metformin in this combination is administered in a daily dose of between 125 and 2550 mg. In still a further variation, the metformin in this combination is administered in a daily dose of between 250 and 2550 mg.

[0061] In regard to each of the above embodiments and variations thereof regarding pharmaceutical compositions, Compound I may be administered as a free base or as a pharmaceutically acceptable salt thereof. In particular variations, Compound I is administered as a hydrochloride salt or a tartrate salt of Compound I.

[0062] Also in regard to each of the above embodiments and variations thereof regarding pharmaceutical compositions, the pharmaceutical composition may optionally be a single dose form adapted for oral administration, optionally a solid formulation adapted for oral administration, and optionally a tablet or capsule adapted for oral administration. The pharmaceutical formulation may also be an extended release formulation adapted for oral administration.

[0063] Also in regard to each of the above embodiments and variations thereof regarding pharmaceutical compositions, the pharmaceutical composition may be employed to prevent or treat conditions mediated by DPP-IV such as diabetes and more particularly, type 2 diabetes mellitus; diabetic dislipidemia; impaired glucose tolerance (IGT); impaired fasting plasma glucose (IFG); metabolic acidosis; ketosis; appetite regulation; obesity; complications associated with diabetes including diabetic neuropathy, diabetic retinopathy and kidney disease; hyperlipidemia including hypertriglyceridemia, hypercholesteremia, hypoHDLemia and postprandial hyperlipidemia; arteriosclerosis; hypertension; myocardial infarction, angina pectoris, cerebral infarction, cerebral apoplexy and metabolic syndrome.

[0064] Also provided are kits comprising multiple doses of pharmaceutical composition according to the present invention.

[0065] In one variation, the kits further comprise instructions which comprise one or more forms of information selected from the group consisting of indicating a disease state for which the pharmaceutical composition is to be administered, storage information for the pharmaceutical composition, dosing information and instructions regarding how to administer the pharmaceutical composition.

[0066] Also provided are articles of manufacture comprising multiple doses of pharmaceutical composition according to the present invention. In one variation, the articles of manufacture further comprise packaging materials such as a container for housing the multiple doses of the pharmaceutical composition and or a label indicating one or more members of the group consisting of a disease state for which the compound is to be administered, storage information, dosing information and/or instructions regarding how to administer the composition.

[0067] It is noted in regard to all of the above embodiments that the embodiments should be interpreted as being open ended in the sense that the methods may comprise further actions beyond those specified including the administration of other pharmaceutically active materials to a patient. Similarly, unless otherwise specified, the pharmaceutical compositions, kits and articles of manufacture may further include other materials including other pharmaceutically active materials.

BRIEF DESCRIPTION OF THE FIGURE

[0068] Figure 1 illustrates DPP IV inhibition at day 14 after daily single oral administration of Compound I for 14 days in a newly-diagnosed type II diabetes patient population.

DEFINITIONS

[0069] Unless otherwise stated, the following terms used in the specification and claims shall have the following meanings for the purposes of this Application.

[0070] "Disease" specifically includes any unhealthy condition of an animal or part thereof and includes an unhealthy condition that may be caused by, or incident to, medical or veterinary therapy applied to that animal, i.e., the "side effects" of such therapy.

[0071] "Pharmaceutically acceptable" means that which is useful in preparing a pharmaceutical composition that is generally safe, non-toxic and neither biologically nor otherwise undesirable and includes that which is acceptable for veterinary use as well as human pharmaceutical use.

[0072] "Pharmaceutically acceptable salts" means salts which are pharmaceutically acceptable, as defined above, and which possess the desired pharmacological activity. Such salts include, but are not limited to, acid addition salts formed with inorganic acids such as hydrochloric acid, hydrobromic acid, sulfuric acid, nitric acid, phosphoric acid, and the like; or with organic acids such as acetic acid, trifluoroacetic acid, propionic acid, hexanoic acid, heptanoic acid, cyclopentanepropionic acid, glycolic acid, pyruvic acid, lactic acid, malonic acid, succinic acid, malic acid, maleic acid, fumaric acid, tartaric acid, citric acid, benzoic acid, *o*-(4-hydroxybenzoyl)benzoic acid, cinnamic acid, mandelic acid, methanesulfonic acid, ethanesulfonic acid, 1,2-ethanedisulfonic acid, 2-hydroxyethanesulfonic acid, benzenesulfonic acid, *p*-chlorobenzenesulfonic acid, 2-naphthalenesulfonic acid, *p*-toluenesulfonic acid, camphorsulfonic acid, 4-methylbicyclo[2.2.2]oct-2-ene-1-carboxylic acid, glucoheptonic acid, 4,4'-methylenebis(3-hydroxy-2-ene-1-carboxylic acid), 3-phenylpropionic acid, trimethylacetic acid, tertiary butylacetic acid, lauryl sulfuric acid, gluconic acid, glutamic acid, hydroxynaphthoic acid, salicylic acid, stearic acid, muconic acid and the like.

[0073] Pharmaceutically acceptable salts also include, but are not limited to, base addition salts which may be formed when acidic protons present are capable of reacting with inorganic or organic bases. Acceptable inorganic bases include, but are not limited to, sodium hydroxide, sodium carbonate, potassium hydroxide, aluminum hydroxide and calcium hydroxide. Acceptable organic bases include, but are not limited to, ethanolamine, diethanolamine, triethanolamine, tromethamine, *N*-methylglucamine and the like.

[0074] "Therapeutically effective amount" means that amount of a compound which, when administered to an animal for treating a disease, is sufficient to effect such treatment for the disease.

[0075] "Treatment" or "treating" means any administration of a therapeutically effective amount of a compound and includes:

(1) preventing the disease from occurring in an animal which may be predisposed to the disease but does not yet experience or display the pathology or symptomatology of the disease,

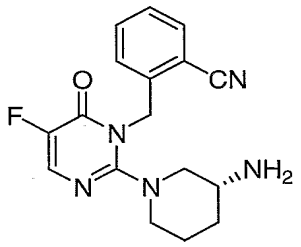
(2) inhibiting the disease in an animal that is experiencing or displaying the pathology or symptomatology of the disease (i.e., arresting further development of the pathology and/or symptomatology), or

(3) ameliorating the disease in an animal that is experiencing or displaying the pathology or symptomatology of the disease (i.e., reversing the pathology and/or symptomatology).

DETAILED DESCRIPTION OF THE INVENTION

1. 2-[[6-[(3R)-3-AMINO-1-PIPERIDINYL]-3,4-DIHYDRO-3-METHYL-2,4-DIOXO-1(2H)-PYRIMIDINYL]METHYL]-BENZONITRILE AND COMPOSITIONS THEREOF

[0076] The present invention relates generally to the administration of 2-[[2-[(3*R*)-3-Amino-piperidinyl)-5-fluoro-6-oxo-6*H*-pyrimidinyl]methyl]-benzonitrile (referred to herein as "Compound I") whose structure is provided below.



[0077] Example 1 describes one method for synthesizing Compound I. It is noted that other methods for synthesizing Compound I may be used as would be appreciated to one of ordinary skill in the art.

[0078] Compound I may be administered in its free base form and may also be administered in the form of salts, hydrates and prodrugs that are converted *in vivo* into the free base form of Compound I. For example, it is within the scope of the present invention to administer Compound I as a pharmaceutically acceptable salt derived from various

organic and inorganic acids and bases in accordance with procedures well known in the art. As used herein, Compound I is intended to encompass salts, hydrates and prodrugs of Compound I unless otherwise specified.

[0079] A pharmaceutically acceptable salt of Compound I preferably confers improved pharmacokinetic properties as compared to the free base form Compound I. Pharmaceutically acceptable salts may also initially confer desirable pharmacokinetic properties on Compound I that it did not previously possess, and may even positively affect the pharmacodynamics of the compound with respect to its therapeutic activity in the body.

[0080] Particular examples of salts, hydrates and prodrugs of Compound I include, but are not limited to salt forms formed by inorganic or organic acids, e.g., hydrohalides such as hydrochloride, hydrobromide, hydroiodide; other mineral acids and their corresponding salts such as sulfate, nitrate, phosphate, etc.; alkyl and monoarylsulfonates such as ethanesulfonate, toluenesulfonate and benzenesulfonate; and other organic acids and their corresponding salts such as acetate, trifluoroacetate, tartrate, maleate, succinate, citrate, benzoate, salicylate and ascorbate. Further acid addition salts include, but are not limited to: adipate, alginate, arginate, aspartate, bisulfate, bisulfite, bromide, butyrate, camphorate, camphorsulfonate, caprylate, chloride, chlorobenzoate, cyclopentanepropionate, digluconate, dihydrogenphosphate, dinitrobenzoate, dodecylsulfate, fumarate, galacterate (from mucic acid), galacturonate, glucoheptaoate, gluconate, glutamate, glycerophosphate, hemisuccinate, hemisulfate, heptanoate, hexanoate, hippurate, hydrochloride, hydrobromide, hydroiodide, 2-hydroxyethanesulfonate, iodide, isethionate, iso-butyrate, lactate, lactobionate, malate, malonate, mandelate, metaphosphate, methanesulfonate, methylbenzoate, monohydrogenphosphate, 2-naphthalenesulfonate, nicotinate, nitrate, oxalate, oleate, pamoate, pectinate, persulfate, phenylacetate, 3-phenylpropionate, phosphate, phosphonate and phthalate.

[0081] In particular variations, Compound I is administered as a hydrochloride salt or a tartrate salt of Compound I. Example 1 describes the preparation of the hydrochloride and tartrate salt forms of Compound I.

2. ADMINISTRATION AND USE OF COMPOUND I

[0082] The present invention relates generally to a method comprising administering Compound I to a patient at a daily dose of between 5 mg/day and 300 mg/day of Compound I to a patient, optionally between 10 mg and 250 mg of Compound I, optionally between 20 mg and 200 mg of Compound I, and optionally between 25 mg and 200 mg of Compound I. Specific dosage amounts that may be used include, but are not limited to 12.5 mg, 25 mg, 50 mg, 75 mg, 100 mg and 150 mg of Compound I per day. It is noted that unless otherwise specifically specified, Compound I may be administered in its free base form or as a pharmaceutically acceptable salt. However, the dosage amounts and ranges provided herein are always based on the molecular weight of the free base form of Compound I.

[0083] Compound I may be administered by any route of administration. In particular embodiments, however, the method of the present invention is practiced by administering Compound I orally. This type of administration is advantageous in that it is easy and may be self-administered by the patient.

[0084] Compound I may be administered one or more times per day. An advantage of the present invention, however, is that Compound I can be effectively administered at the dosage levels specified herein one time per day and may also be administered as a single dosage form one time a day. By being able to administer Compound I at the dosage levels specified herein only one time per day and orally, it is easier for patients to self-administer Compound I, thus improving the compliance of usage among patients requiring in vivo inhibition of DPP-IV activity.

[0085] Advantageously, Compound I is suitable for prolonged continuous use and may be administered to patients for an extended period of time. Accordingly, the method may be performed where Compound I is administered to a patient each day (optionally 1 time daily) for a period of at least 1 month, optionally for at least 3 months, and, if necessary, optionally for the duration of the patients disease profile. Because of the long acting DPP-IV inhibitory affects of Compound I, it is envisioned that a dosing regiment less frequent than once per day may be employed.

[0086] Advantageously, Compound I may be administered at any time during the day. Optionally, Compound I is administered daily one time a day where administration occurs

in the morning before meals. Because Compound I can stimulate insulin secretion when blood glucose level reaches levels above 100 mg/dl, it may be beneficial to have Compound I in systemic circulation before an elevation in blood glucose levels occurs postprandially.

[0087] Compound I may be administered to any patient who would benefit from a course of treatment leading to the reduction of in vivo DPP-IV activity. Figure 1 illustrates and Example 3 describes the observed effect that administering Compound I has on a patient's plasma DPPIV activity after 14 days at dosage levels of 12.5 mg/day, 25mg/day, 50 mg/day, 100mg/day, 200 mg/day and 400mg /day.

[0088] As can be seen from the data shown in Figure 1, by administering Compound I one time per day at the dosage levels specified herein, Compound I can be effectively used relative to disease states where it is desired to reduce the patient's plasma DPPIV activity by greater than 60%, optionally greater than 70%, and optionally greater than 80%. Specifically, when at least 25mg of Compound I is administered, the patient's plasma DPPIV activity may be reduced by greater than 60% relative to baseline for a period of at least at least 6 hours, 12 hours, 18 hours and even 24 hours following administration.

[0089] Examples of particular applications for administering Compound I include, but are not limited to the prevention, delay of progression, and/or treatment of conditions mediated by DPP-IV, in particular diabetes and more particularly, type 2 diabetes mellitus, diabetic dislipidemia, impaired glucose tolerance (IGT), impaired fasting plasma glucose (IFG), metabolic acidosis, ketosis, appetite regulation, obesity and complications associated with diabetes including diabetic neuropathy, diabetic retinopathy, inflammatory bowel disease, Crohn's disease, chemotherapy-induced enteritis, oral mucositis, Shorthened Bowel Syndrome and kidney disease. The conditions mediated by DPP-IV further includes hyperlipidemia such as hypertriglyceridemia, hypercholesteremia, hypoHDLemia and postprandial hyperlipidemia; arteriosclerosis; hypertension; myocardial infarction, angina pectoris, cerebral infarction, cerebral apoplexy and metabolic syndrome.

[0090] It is believed that administration of Compound I to type I or type II diabetic patients following a minimum treatment of at least 30 days will improve one or more cardiovascular measurements. Examples of cardiac measurements that may be improved include, but are not limited to a decrease in mean systolic blood pressure, an increase in

HDL cholesterol, improvement in LDL/HDL ratio and a reduction in triglycerides.

[0091] It is also believed that administration of Compound I in combination with one or more antidiabetic compounds to type I or type II diabetic patients following a minimum treatment of at least 30 days will improve one or more cardiovascular measurements. Examples of cardiac measurements that may be improved include, but are not limited to a decrease in mean systolic blood pressure, an increase in HDL cholesterol, improvement in LDL/HDL ratio and a reduction in triglycerides.

[0092] In one variation, Compound I is administered to a patient with type 2 diabetes. Patients receiving Compound I may also have a malfunction in insulin secretion from pancreatic islets rather than patients who have developed insulin resistance in peripheral insulin sensitive tissues/organs.

[0093] Advantageously, administering Compound I one time per day at the dosage levels specified herein may also be used to treat patients who are prediabetic. It is believed that administering Compound I in a patient who is prediabetic serves to delay development of type II diabetes in that patient. Sustained increase in blood glucose desensitizes pancreatic islet function and impairs insulin secretion. By improving cyclic AMP levels and the calcium dynamics in beta cells, the cells activate genes repairing damaged cell components and are less vulnerable to glucose toxicity.

[0094] Administering Compound I one time per day at the dosage levels specified herein is expected to have a range of desirous biological effects *in vivo*. For example, administering Compound I one time per day at the dosage levels specified herein reduces the patient's blood glucose level when compared with placebo control. Such a decrease in postprandial blood glucose levels helps diabetic patients to maintain lower glucose levels.

[0095] Administering Compound I one time per day at the dosage levels specified herein is also expected to have the affect of increasing the patient's insulin level or insulin sensitivity. Insulin facilitates entry of glucose into muscle, adipose and several other tissues. The mechanism by which cells can take up glucose is by facilitated diffusion through stimulation of insulin receptor. C-peptide and insulin are protein chains created by the activation and division of proinsulin (an inactive precursor to insulin). C-peptide and insulin are created and stored in the beta cells of the pancreas. When insulin is released into the bloodstream, equal amounts of C-peptide also are released. This makes

C-peptide useful as a marker of insulin production. Administering Compound I according to the present invention is expected to increase the patient's C-peptide level.

[0096] Administering Compound I one time per day at the dosage levels specified herein is also expected to have the affect of decreasing the patient's hemoglobin A1c level by greater than 0.5% when compared to placebo control after extended treatment with Compound I. Hb-A1c values are known to be directly proportional to the concentration of glucose in the blood over the life span of the red blood cells. Hb-A1c thus gives an indication of a patient's blood glucose levels over the previous last 90 days, skewed to the most recent 30 days. The observed reduction in the patient's hemoglobin A1c level thus verifies the sustained reduction in the patient's blood glucose levels as a result of administering Compound I one time per day at the dosage levels specified herein.

3. COMBINATION THERAPY INCLUDING COMPOUND I

[0097] The present invention also relates to the use of Compound I in combination with one or more other antidiabetic compounds. Examples of such other antidiabetic compounds include, but are not limited to insulin signaling pathway modulators, like protein tyrosine phosphatase (PTPase) inhibitors, and glutamine-fructose-6-phosphate amidotransferase (GFAT) inhibitors; compounds influencing a dysregulated hepatic glucose production, like glucose-6-phosphatase (G6Pase) inhibitors, fructose-1,6-bisphosphatase (F-1,6-BPase) inhibitors, glycogen phosphorylase (GP) inhibitors, glucagon receptor antagonists and phosphoenolpyruvate carboxykinase (PEPCK) inhibitors; pyruvate dehydrogenase kinase (PDHK) inhibitors; insulin sensitivity enhancers (insulin sensitizers); insulin secretion enhancers (insulin secretagogues); alpha-glucosidase inhibitors; inhibitors of gastric emptying; glucokinase activators, GLP-1 receptor agonists, GLP-2 receptor agonists, UCP modulators, RXR modulators, GSK-3 inhibitors, PPAR modulators, metformin, insulin; and α_2-adrenergic antagonists. Compound I may be administered with such at least one other antidiabetic compound either simultaneously as a single dose, at the same time as separate doses, or sequentially (i.e., where one is administered before or after the other is administered).

[0098] Examples of PTPase inhibitors that may be used in combination with Compound I include, but are not limited to those disclosed in U.S. Patent. Nos. 6,057,316,

6,001,867, and PCT Publication Nos. WO 99/58518, WO 99/58522, WO 99/46268, WO 99/46267, WO 99/46244, WO 99/46237, WO 99/46236, and WO 99/15529.

[0099] Examples of GFAT inhibitors that may be used in combination with Compound I include, but are not limited to those disclosed in Mol. Cell. Endocrinol. 1997, 135(1), 67-77.

[0100] Examples of G6Pase inhibitors that may be used in combination with Compound I include, but are not limited to those disclosed in PCT Publication Nos. WO 00/14090, WO 99/40062 and WO 98/40385, European Patent Publication No. EP682024 and Diabetes 1998, 47,1630-1636.

[0101] Examples of F-1,6-BPase inhibitors that may be used in combination with Compound I include, but are not limited to those disclosed in PCT Publication Nos. WO 00/14095, WO 99/47549, WO 98/39344, WO 98/39343 and WO 98/39342.

[0102] Examples of GP inhibitors that may be used in combination with Compound I include, but are not limited to those disclosed in U.S. Patent No. 5,998,463, PCT Publication Nos. WO 99/26659, WO 97/31901, WO 96/39384 and WO9639385 and European Patent Publication Nos. EP 978279 and EP 846464.

[0103] Examples of glucagon receptor antagonists that may be used in combination with Compound I include, but are not limited to those disclosed in U.S. Patent Nos. 5,880,139 and 5,776,954, PCT Publication Nos. WO 99/01423, WO 98/22109, WO 98/22108, WO 98/21957, WO 97/16442 and WO 98/04528 and those described in Bioorg Med. Chem. Lett 1992, 2, 915-918, J. Med. Chem. 1998, 41, 5150-5157, and J. Biol Chem. 1999, 274; 8694-8697.

[0104] Examples of PEPCK inhibitors that may be used in combination with Compound I include, but are not limited to those disclosed in U.S. Patent No. 6,030,837 and Mol. Biol. Diabetes 1994,2, 283-99.

[0105] Examples of PDHK inhibitors that may be used in combination with Compound I include, but are not limited to those disclosed in J. Med. Chem. 42 (1999) 2741-2746.

[0106] Examples of insulin sensitivity enhancers that may be used in combination with Compound I include, but are not limited to GSK-3 inhibitors, retinoid X receptor (RXR) agonists, Beta-3 AR agonists, UCP modulators, antidiabetic thiazolidinediones

(glitazones), non-glitazone type PPAR gamma agonists, dual PPAR gamma/PPAR alpha agonists, antidiabetic vanadium containing compounds and biguanides such as metformin.

[0107] Examples of GSK-3 inhibitors include, but are not limited to those disclosed in PCT Publication Nos. WO 00/21927 and WO 97/41854.

[0108] Examples of RXR modulators include, but are not limited to those disclosed in U.S. Patent Nos. 4,981,784, 5,071,773, 5,298,429 and 5,506,102 and PCT Publication Nos. WO89/05355, WO91/06677, WO92/05447, WO93/11235, WO95/18380, WO94/23068, and WO93/23431.

[0109] Examples of Beta-3 AR agonists include, but are not limited to CL-316,243 (Lederle Laboratories) and those disclosed in U.S. Patent No. 5,705,515 and PCT Publication Nos. WO 99/29672, WO 98/32753, WO 98/20005, WO 98/09625, WO 97/46556, and WO 97/37646.

[0110] Examples of UCP modulators include agonists of UCP-1, UCP-2 and UCP-3. Examples of UCP modulators include, but are not limited to those disclosed in Vidal-Puig et al., Biochem. Biophys. Res. Commun., Vol. 235(1) pp. 79-82 (1997).

[0111] Examples of antidiabetic, PPAR modulating thiazolidinediones (glitazones) include, but are not limited to, (S)-((3,4-dihydro-2-(phenyl-methyl)-2H-1-benzopyran-6-yl)methyl-thiazolidine-2,4-dione (englitazone), 5-{[4-(3-(5-methyl-2-phenyl-4-oxazolyl)-1-oxo-propyl)-phenyl]-methyl}-thiazolidine-2,4-dione (darglitazone), 5-{[4-(1-methyl-cyclohexyl)methoxy)-phenyl]methyl]-thiazolidine-2,4-dione (ciglitazone), 5-{[4-(2-(1-indolyl)ethoxy)phenyl]methyl}-thiazolidine-2,4-dione (DRF2189), 5-{4-[2-(5-methyl-2-phenyl-4-oxazoly)-ethoxy)]benzyl}-thiazolidine-2,4-dione (BM-13.1246), 5-(2-naphthylsulfonyl)-thiazolidine-2,4-dione (AY-31637), bis{4-[(2,4-dioxo-5-thiazolidinyl)-methyl]phenyl}methane (YM268), 5-{4-[2-(5-methyl-2-phenyl-4-oxazolyl)-2-hydroxyethoxy]-benzyl}- -thiazolidine-2,4-dione (AD-5075), 5-[4-(1-phenyl-1-cyclopropanecarbonylamino)-benzyl]-thiazolidine-2,4-dione (DN-108) 5-{[4-(2-(2,3-dihydroindol-1-yl)ethoxy)phenylmethyl)-thiazolidine-2,4-dione, 5-[3-(4-chloro-phenyl])-2-- propynyl]-5-phenylsulfonyl)thiazolidine-2,4-dione, 5-[3-(4-chlorophenyl])-- 2-propynyl]-5-(4-fluorophenyl-sulfonyl)thiazolidine-2,4-dione,5-{[4-(2-(methyl-2-pyridinyl-amino)-ethoxy)phenyl]methyl}-thiazolidine-2,4-dione (rosiglitazone), 5-{[4-(2-(5-ethyl-2-pyridyl)ethoxy)phenyl]-methyl}-thiazolidine-2,4-dione (pioglitazone; marketed under the

trademark ACTOS™), 5-[6-(2-fluoro-benzyloxy)-naphthalen-2-ylmethyl]-thiazolidine-2,4-dione (MCC555), 5-([2-(2-naphthyl)-benzoxazol-5-yl]-methyl}thiazolidine-2,4-dione (T-174), edaglitazone (BM-13-1258), rivoglitazone (CS-011), and 5-(2,4-dioxothiazolidin-5-ylmethyl)-2-methoxy-N-(4-trifluoromethyl-benzyl)benzamide (KRP297).

[0112] Examples of non-glitazone type PPAR gamma agonists include, but are not limited to N-(2-benzoylphenyl)-L-tyrosine analogues, such as GI-262570, reglixane (JTT501) and FK-614 and metaglidasen (MBX-102).

[0113] Examples of dual PPAR gamma/PPAR alpha agonists include, but are not limited to omega.-[(oxoquinazolinylalkoxy)phenyl]alkanoates and analogs thereof including those described in PCT Publication No. WO 99/08501 and Diabetes 2000, 49(5), 759-767; tesaglitazar, muraglitazar and naveglitazar.

[0114] Examples of antidiabetic vanadium containing compounds include, but are not limited to those disclosed in the U.S. Patent No. 5,866,563.

[0115] Metformin (dimethyldiguanide) and its hydrochloride salt is marketed under the trademark GLUCOPHAGE™.

[0116] Examples of insulin secretion enhancers include but are not limited to glucagon receptor antagonists (as described above), sulphonyl urea derivatives, incretin hormones or mimics thereof, especially glucagon-like peptide-1 (GLP-1) or GLP-1 agonists, beta-cell imidazoline receptor antagonists, and short-acting insulin secretagogues, like antidiabetic phenylacetic acid derivatives, antidiabetic D-phenylalanine derivatives, and mitiglinide and pharmaceutical acceptable salts thereof.

[0117] Examples of sulphonyl urea derivatives include, but are not limited to, glisoxepid, glyburide, glibenclamide, acetohexamide, chloropropamide, glibornuride, tolbutamide, tolazamide, glipizide, carbutamide, gliquidone, glyhexamide, phenbutamide, tolcyclamide; glimepiride and gliclazide. Tolbutamide, glibenclamide, gliclazide, glibornuride, gliquidone, glisoxepid and glimepiride can be administered in the form that they are marketed under the trademarks RASTINON HOECHST™, AZUGLUCON™, DIAMICRONT™, GLUBORID™, GLURENORM™, PRO-DIABAN™ and AMARYL™, respectively.

[0118] Examples of GLP-1 agonists include, but are not limited to those disclosed in U.S. Patent Nos. 5,120,712, 5,118,666 and 5,512,549, and PCT Publication No. WO

91/11457. In particular, GLP-1 agonists include those compounds like GLP-1 (7-37) in which compound the carboxy-terminal amide functionality of Arg^{36} is displaced with Gly at the 37^{th} position of the GLP-1 (7-36)NH_2 molecule and variants and analogs thereof including GLN^9-GLP-1 (7-37), D-GLN^9-GLP-1 (7-37), acetyl LYS^9-GLP-1 (7-37), LYS^{18}-GLP-1 (7-37) and, in particular, GLP-1 (7-37)OH, VAL^8-GLP-1 (7-37), GLY^8-GLP-1(7-37), THR^8-GLP-1 (7-37), GLP-1 (7-37) and 4-imidazopropionyl-GLP-1.

[0119] One particular example of a GLP-1 agonist is Extendatide, a 39-amino acid peptide amide, which is marketed under the trademark BYETTA™. Exenatide has the empirical formula $C_{184}H_{282}N_{50}O_{60}S$ and molecular weight of 4186.6 Daltons. The amino acid sequence for Exenatide is as follows: H-His-Gly-Glu-Gly-Thr-Phe-Thr-Ser-Asp-Leu-Ser-Lys-Gln-Met-Glu-Glu-Glu-Ala-Val-Arg-Leu-Phe-Ile-Glu-Trp-Leu-Lys-Asn-Gly-Gly-Pro-Ser-Ser-Gly-Ala-Pro-Pro-Pro-Ser-NH_2

[0120] Examples of glucagon-like peptide-2 (GLP-2) or GLP-2 agonists include, but are not limited to those disclosed in U.S. Patent No. 7,056,886 and PCT Publication Nos. WO 00/53208, WO 01/49314 and WO 03/099854. One particular example of a GLP-2 agonist is TEDUGLUTIDE™, a 39-amino acid peptide amide (NPS Pharmaceuticals, Inc.).

[0121] Examples of beta-cell imidazoline receptor antagonists include, but are not limited to those described in PCT Publication No. WO 00/78726 and J. Pharmacol. Exp. Ther. 1996; 278; 82-89.

[0122] An example of an antidiabetic phenylacetic acid derivative is repaglinide and pharmaceutically acceptable salts thereof.

[0123] Examples of antidiabetic D-phenylalanine derivatives include, but are not limited to nateglinide (N-[(trans4-isopropylcyclohexyl)-carbonyl]-D-phenylalanine, EP 196222 and EP 526171) and repaglinide ((S)-2-ethoxy-4-{2-[[3-methy- 1-1-[2-(1-piperidinyl)phenyl]butyl]-amino]-2-oxoethyl}benzoic acid, EP 0 147 850 A2 and EP 0 207 331 A1). Nateglinide is intended to include the particular crystal forms (polymorphs) disclosed in U.S. Patent No. 5,488,510 and European Patent Publication No. EP 0526171 B1. Repaglinide and nateglinide may be administered in the form as they are marketed under the trademarks NOVONORM™ and STARLIX™, respectively.

[0124] Examples of alpha-Glucosidase inhibitors include, but are not limited to, acarbose, N-(1,3-dihydroxy-2-propyl)valiolamine (voglibose) and the 1-deoxynojirimycin derivative miglitol. Acarbose is 4",6"-dideoxy-4'-[(1S)-(1,4,6/5)-4,5,6-trihydroxy-3-hydroxymethyl-2-cyclo-hexenylamino)maltotriose. The structure of acarbose can as well be described as O-4,6-dideoxy-4-{[1S,4R,5S,6S]-4,5,6-trihydroxy-3-(hydroxymethyl)-2-cyclohexen-1-yl]-amino)-alpha-D-glucopyranosyl-(1-4)-O- alpha-D-glucopyranosyl-(1-4)-D-glucopyranose. (U.S. Patent No. 4,062,950 and European Patent Publication No. EP 0 226 121). Acarbose and miglitol may be administered in the forms that they are marketed under the trademarks GLUCOBAY™ and DIASTABOL 50™ respectively.

[0125] Examples of inhibitors of gastric emptying other than GLP-1 include, but are not limited to those disclosed in J. Clin. Endocrinol. Metab. 2000, 85(3), 1043-1048, and Diabetes Care 1998; 21; 897-893, especially Amylin and analogs thereof such as pramlintide. Amylin is described in Diabetologia 39, 1996, 492-499.

[0126] Examples of α_2-adrenergic antagonists include, but are not limited to midaglizole which is described in Diabetes 36,1987, 216-220. The insulin that may be used in combination with Compound I include, but are not limited to animal insulin preparations extracted from the pancreas of bovine and pig; human insulin preparations genetically synthesized using *Escherichia coli* or yeast; zinc insulin; protamine zinc insulin; fragment or derivative of insulin (e.g., INS-1) and an oral insulin preparation.

[0127] In one particular embodiment, the antidiabetic compound administered in combination with Compound I is selected from the group consisting of nateglinide, mitiglinide, repaglinide, metformin, extendatide, rosiglitazone, tesaglitazar, pioglitazone, glisoxepid, glyburide, glibenclamide, acetohexamide, chloropropamide, glibornuride, tolbutamide, tolazamide, glipizide, carbutamide, gliquidone, glyhexamide, phenbutamide, tolcyclamide, glimepiride and gliclazide, including any pharmaceutically acceptable salts thereof.

[0128] Examples of the preparation and formulation of PTPase inhibitors, GSK-3 inhibitors, non-small molecule mimetic compounds, GFAT inhibitors, G6Pase inhibitors, glucagon receptor antagonists, PEPCK inhibitors, F-1,6-BPase inhibitors, GP inhibitors, RXR modulators, Beta-3 AR agonists, PDHK inhibitors, inhibitors of gastric emptying

and UCP modulators are disclosed in the patents, applications and references provided herein.

[0129] In the case of combination therapy with Compound I, the other antidiabetic compound may be administered (e.g., route and dosage form) in a manner known per se for such compound. Compound I and the other antidiabetic compound may be administered sequentially (i.e., at separate times) or at the same time, either one after the other separately in two separate dose forms or in one combined, single dose form. In one particular embodiment, the other antidiabetic compound is administered with Compound I as a single, combined dosage form. The dose of the antidiabetic compound may be selected from the range known to be clinically employed for such compound. Any of therapeutic compounds of diabetic complications, antihyperlipemic compounds, antiobestic compounds or antihypertensive compounds can be used in combination with Compound I in the same manner as the above antidiabetic compounds. Examples of therapeutic compounds of diabetic complications include, but are not limited to, aldose reductase inhibitors such as tolrestat, epalrestat, zenarestat, zopolrestat, minalrestat, fidarestat, CT-112 and ranirestat; neurotrophic factors and increasing compounds thereof such as NGF, NT-3, BDNF and neurotrophin production-secretion promoters described in WO01/14372 (e.g., 4-(4-chlorophenyl)-2-(2-methyl-1-imidazolyl)-5-[3-(2-methylphenoxy)propyl]oxazole); neuranagenesis stimulators such as Y-128; PKC inhibitors such as ruboxistaurin mesylate; AGE inhibitors such as ALT946, pimagedine, N-phenacylthiazolium bromide (ALT766), ALT-711, EXO-226, pyridorin and pyridoxamine; reactive oxygen scavengers such as thioctic acid; cerebral vasodilators such as tiapride and mexiletine; somatostatin receptor agonists such as BIM23190; and apoptosis signal regulating kinase-1 (ASK-1) inhibitors. Examples of antihyperlipemic compounds include, but are not limited to, HMG-CoA reductase inhibitors such as pravastatin, simvastatin, lovastatin, atorvastatin, fluvastatin, rosuvastatin and pitavastatin; squalene synthase inhibitors such as compounds described in WO97/10224 (e.g., N-[[(3R,5S)-1-(3-acetoxy-2,2-dimethylpropyl)-7-chloro-5-(2,3-dimethoxyphenyl)-2-oxo-1,2,3,5-tetrahydro-4,1-benzoxazepin-3-yl]acetyl]piperidine-4-acetic acid); fibrate compounds such as bezafibrate, clofibrate, simfibrate and clinofibrate; ACAT inhibitors such as avasimibe and eflucimibe; anion exchange resins such as colestyramine; probucol;

nicotinic acid drugs such as nicomol and niceritrol; ethyl icosapentate; and plant sterols such as soysterol and γ-oryzanol. Examples of antiobestic compounds include, but are not limited to, dexfenfluramine, fenfluramine, phentermine, sibutramine, amfepramone, dexamphetamine, mazindol, phenylpropanolamine, clobenzorex; MCH receptor antagonists such as SB-568849 and SNAP-7941; neuropeptide Y antagonists such as CP-422935; cannabinoid receptor antagonists such as SR-141716 and SR-147778; ghrelin antagonist; 11β-hydroxysteroid dehydrogenase inhibitors such as BVT-3498; pancreatic lipase inhibitors such as orlistat and ATL-962; Beta-3 AR agonists such as AJ-9677; peptidic anorexiants such as leptin and CNTF (Ciliary Neurotropic Factor); cholecystokinin agonists such as lintitript and FPL-15849; and feeding deterrent such as P-57. Examples of the antihypertensive compounds include angiotensin converting enzyme inhibitors such as captopril, enalapril and delapril; angiotensin II antagonists such as candesartan cilexetil, losartan, eprosartan, valsartan, telmisartan, irbesartan, olmesartan medoxomil, tasosartan and 1-[[2'-(2,5-dihydro-5-oxo-4H-1,2,4-oxadiazol-3-yl)biphenyl-4-yl]methyl]-2-ethoxy-1H-benzimidazole-7-carboxylic acid; calcium channel blockers such as manidipine, nifedipine, nicardipine, amlodipine and efonidipine; potassium channel openers such as levcromakalim, L-27152, AL0671 and NIP-121; and clonidine.

[0130] The structure of the active agents identified herein by code nos., generic or trade names may be taken from the actual edition of the standard compendium "The Merck Index" or from databases, e.g. Patents International (e.g. IMS World Publications). The corresponding content thereof is hereby incorporated by reference. Any person skilled in the art is fully enabled to identify the active agents and, based on these references, likewise enabled to manufacture and test the pharmaceutical indications and properties in standard test models, both in vitro and in vivo.

4. COMPOSITIONS COMPRISING COMPOUND I

[0131] Compound I may be comprised within a pharmaceutical composition adapted for a variety of routes of administration. For example, Compound I may be comprised within a pharmaceutical composition adapted to be administered by a route selected from the group consisting of orally, parenterally, intraperitoneally, intravenously, intraarterially, transdermally, sublingually, intramuscularly, rectally, transbuccally, intranasally,

liposomally, via inhalation, vaginally, intraoccularly, via local delivery (for example by catheter or stent), subcutaneously, intraadiposally, intraarticularly, intraperitoneally and intrathecally. As such, Compound I may be formulated in a variety of pharmaceutically acceptable compositions including injectable forms (e.g. subcutaneous, intravenous, intramuscular and intraperitoneal injections), drip infusions, external application forms (e.g. nasal spray preparations, transdermal preparations; ointments, etc.), and suppositories (e.g. rectal and vaginal suppositories). These different pharmaceutically acceptable compositions can be manufactured by known techniques conventionally used in the pharmaceutical industry with a pharmaceutically acceptable carrier conventionally used in the pharmaceutical industry.

[0132] As used herein, a composition comprising Compound I is intended to encompass the free base form of Compound I, salts, hydrates and prodrugs of Compound I, as well as other materials that may be included in such composition for its intended purpose, including other active ingredients, unless otherwise specified. Particular salt forms of Compound I that may be employed include, but are not limited to, the hydrochloride, and tartrate salt forms of Compound I.

[0133] As noted above, Compound I may advantageously be used when administered to a patient at a daily dose of between 5 mg/day and 300 mg/day of Compound I to a patient, optionally between 10 mg and 250 mg of Compound I, optionally between 20 mg and 200 mg of Compound I, and optionally between 25 mg and 200 mg of Compound I. (in each instance based on the molecular weight of the free base form of Compound I). Specific dosage amounts that may be used include, but are not limited to 12.5 mg, 25 mg, 50 mg, 75 mg, 100 mg and 150 mg of Compound I per day. As also noted above, it is desirable for Compound I to be administered one time per day. Accordingly, pharmaceutical compositions of the present invention may be in the form of a single dose form comprising between 5 mg/day and 300 mg/day of Compound I to a patient, optionally between 10 mg and 250 mg of Compound I, optionally between 20 mg and 200 mg of Compound I, and optionally between 25 mg and 200 mg of Compound I. In specific embodiments, the pharmaceutical composition comprises 12.5 mg, 25 mg, 50 mg, 75 mg, 100 mg or 150 mg of Compound I.

[0134] As also noted above, Compound I may advantageously be used when administered orally. Accordingly, the compositions of the present invention may optionally be adapted for oral administration. In one variation, such pharmaceutical composition is a solid formulation adapted for oral administration. In this regard, the composition, for example, may be in the form of a tablet or capsule. Example 2 provides examples of solid formulations comprising Compound I adapted for oral administration. In another variation, such pharmaceutical composition is a liquid formulation adapted for oral administration.

[0135] As noted above, Compound I may advantageously be used in combination with one or more other antidiabetic compounds. Accordingly, the compositions of the present invention may optionally comprises Compound I in combination with one or more other antidiabetic compounds in a combined, single dose form.

[0136] Optionally, such combined, single dose form comprising Compound I in combination with one or more other antidiabetic compounds is adapted for oral administration and optionally is a solid oral dose form.

[0137] In one variation, such combined, single dose form comprising Compound I in combination with one or more other antidiabetic compounds comprises between 5 mg/day and 300 mg/day of Compound I to a patient, optionally between 10 mg and 250 mg of Compound I, optionally between 20 mg and 200 mg of Compound I, and optionally between 25 mg and 200 mg of Compound I. (in each instance based on the molecular weight of the free base form of Compound I). In specific embodiments, such combined, single dose form comprising Compound I in combination with one or more other antidiabetic compounds comprises 12.5 mg, 25 mg, 50 mg, 75 mg, 100 mg and 150 mg of Compound I.

[0138] Any antidiabetic compound, or set of antidiabetic compounds may be combined with Compound I to form such combined, single dose form. In particular embodiments, such combined, single dose form includes Compound I and one or more members of the group consisting of insulin signaling pathway modulators, like protein tyrosine phosphatase (PTPase) inhibitors, and glutamine-fructose-6-phosphate amidotransferase (GFAT) inhibitors, compounds influencing a dysregulated hepatic glucose production, like glucose-6-phosphatase (G6Pase) inhibitors, fructose-1,6-bisphosphatase (F-1,6-BPase)

inhibitors, glycogen phosphorylase (GP) inhibitors, glucagon receptor antagonists and phosphoenolpyruvate carboxykinase (PEPCK) inhibitors, pyruvate dehydrogenase kinase (PDHK) inhibitors, insulin sensitivity enhancers (insulin sensitizers), insulin secretion enhancers (insulin secretagogues), alpha-glucosidase inhibitors, inhibitors of gastric emptying, glucokinase activators, GLP-1 receptor agonists, GLP-2 receptor agonists, UCP modulators, RXR modulators, GSK-3 inhibitors, PPAR modulators, metformin, insulin, and α_2-adrenergic antagonists. Compound I may be administered with such at least one other antidiabetic compound either simultaneously as a single dose, at the same time as separate doses, or sequentially (i.e., where on is administered before or after the other is administered).

[0139] In one variation, such combined, single dose form comprises Compound I and an antidiabetic thiazolidinedione. Particular examples of thiazolidinediones that may be used in this variation include, but are not limited to (S)-((3,4-dihydro-2-(phenyl-methyl)-2H-1-benzopyran-6-yl)methyl-thiazolidine-2,4-dione (englitazone), 5-{[4-(3-(5-methyl-2-phenyl-4-oxazolyl)-1-oxo-propyl)-phenyl]-methyl}-thiazolidine-2,4-dione (darglitazone), 5-{[4-(1-methyl-cyclohexyl)methoxy)-phenyl]methyl]-thiazolidine-2,4-dione (ciglitazone), 5-{[4-(2-(1-indolyl)ethoxy)phenyl]methyl}-thiazolidine-2,4-dione (DRF2189), 5-{4-[2-(5-methyl-2-phenyl-4-oxazoly)-ethoxy)]benzyl}-thiazolidine-2,4-dione (BM-13.1246), 5-(2-naphthylsulfonyl)-thiazolidine-2,4-dione (AY-31637), bis{4-[(2,4-dioxo-5-thiazolidinyl)-methyl]phenyl}methan- e (YM268), 5-{4-[2-(5-methyl-2-phenyl-4-oxazolyl)-2-hydroxyethoxy]-benzyl}-thiazolidine-2,4-dione (AD-5075), 5-[4-(1-phenyl-1-cyclopropanecarbonylamino)-benzyl]-thiazolidine-2,4-dione (DN-108) 5-{[4-(2-(2,3-dihydroindol-1-yl)ethoxy)phenylmethyl)-thiazolidine-2,4-dione, 5-[3-(4-chloro-phenyl])-2-- propynyl]-5-phenylsulfonyl)thiazolidine-2,4-dione, 5-[3-(4-chlorophenyl])-2-propynyl]-5-(4-fluorophenyl-sulfonyl)thiazolidine-2,4-dione, 5-{[4-(2-(methyl-2-pyridinyl-amino)-ethoxy)phenyl]methyl}-thiazolidine-2,4-dione (rosiglitazone), 5-{[4-(2-(5-ethyl-2-pyridyl)ethoxy)phenyl]-methyl}-thiazolidine-2,4-dione (pioglitazone), 5-[6-(2-fluoro-benzyloxy)-naphthalen-2-ylmethyl]-thiazolidine-2,4-dione (MCC555), 5-([2-(2-naphthyl)-benzoxazol-5-yl]-methyl}thiazolidine-2,4-dione (T-174), edaglitazone (BM-13-1258), rivoglitazone (CS-011) and 5-(2,4-dioxothiazolidin-5-ylmethyl)-2-met- hoxy-N-(4-trifluoromethyl-benzyl)benzamide (KRP297).

[0140] In one particular variation, the thiazolidinedione in such combined, single dose form is 5-{[4-(2-(5-ethyl-2-pyridyl)ethoxy)phenyl]-methyl}-thiazolidine-2,4-dione (pioglitazone) and its hydrochloride salt which is marketed under the trademark ACTOS™.

[0141] In another particular variation, the thiazolidinedione is 5-{[4-(2-(methyl-2-pyridinyl-amino)-ethoxy)phenyl]methyl}-thiazolidine-2,4-dione (rosiglitazone) and its maleate salt.

[0142] In another variation, such combined, single dose form comprises Compound I and a non-glitazone type PPAR gamma agonist.

[0143] In another variation, such combined, single dose form comprises Compound I and a biguanide. A particular example of a biguanide that may be used in this variation is Metformin (dimethyldiguanide) and its hydrochloride salt which is marketed under the trademark GLUCOPHAGE™.

[0144] In another variation, such combined, single dose form comprises Compound I and a sulphonyl urea derivative. Particular examples of sulphonyl urea derivatives that may be used in this variation include, but are not limited to glisoxepid, glyburide, glibenclamide, acetohexamide, chloropropamide, glibornuride, tolbutamide, tolazamide, glipizide, carbutamide, gliquidone, glyhexamide, phenbutamide, tolcyclamide; glimepiride and gliclazide. Tolbutamide, glibenclamide, gliclazide, glibornuride, gliquidone, glisoxepid and glimepiride can be administered in the form as they are marketed under the trademarks RASTINON HOECHST™, AZUGLUCON™, DIAMICRONT™, GLUBORID™, GLURENORM™, PRO-DIABAN™ and AMARYL™, respectively.

[0145] In another variation, such combined, single dose form comprises Compound I and an antidiabetic D-phenylalanine derivative. Particular examples of antidiabetic D-phenylalanine derivatives that may be used in this variation include, but are not limited to repaglinide and nateglinide which may be administered in the form as they are marketed under the trademarks NOVONORM™ and STARLIX™, respectively.

[0146] In another variation, such combined, single dose form comprises Compound I and an alpha-Glucosidase inhibitor. Particular examples of alpha-Glucosidase inhibitors that may be used in this variation include, but are not limited to acarbose, miglitol and voglibose which may be administered in the form as they are marketed under the trademarks GLUCOBAY™, DIASTABOL 50™ and BASEN™, respectively.

[0147] In one particular embodiment, the antidiabetic compound administered in combination with Compound I in such combined, single dose form is selected from the group consisting of nateglinide, mitiglinide, repaglinide, metformin, extendatide, rosiglitazone, pioglitazone, glisoxepid, glyburide, glibenclamide, acetohexamide, chloropropamide, glibornuride, tolbutamide, tolazamide, glipizide, carbutamide, gliquidone, glyhexamide, phenbutamide, tolcyclamide, glimepiride and gliclazide, including any pharmaceutically acceptable salts thereof.

[0148] In regard to each of the above embodiments and variations regarding a combined, single dose form comprising the combination of Compound I and one or more other antidiabetic compounds, the pharmaceutical composition may optionally be adapted for oral administration and in this regard may optionally be a solid formulation such as a tablet or capsule or may alternatively be in a liquid formulation adapted for oral administration. The dose of the antidiabetic compound may be selected from the range known to be clinically employed for such compound. Any of therapeutic compounds of diabetic complications, antihyperlipemic compounds, antiobestic compounds or antihypertensive compounds can be used in combination with Compound I in the same manner as the above antidiabetic compounds. Examples of therapeutic compounds of diabetic complications include, but are not limited to, aldose reductase inhibitors such as tolrestat, epalrestat, zenarestat, zopolrestat, minalrestat, fidarestat, CT-112 and ranirestat; neurotrophic factors and increasing compounds thereof such as NGF, NT-3, BDNF and neurotrophin production-secretion promoters described in WO01/14372 (e.g., 4-(4-chlorophenyl)-2-(2-methyl-1-imidazolyl)-5-[3-(2-methylphenoxy)propyl]oxazole); neuranagenesis stimulators such as Y-128; PKC inhibitors such as ruboxistaurin mesylate; AGE inhibitors such as ALT946, pimagedine, N-phenacylthiazolium bromide (ALT766), ALT-711, EXO-226, pyridorin and pyridoxamine; reactive oxygen scavengers such as thioctic acid; cerebral vasodilators such as tiapride and mexiletine; somatostatin receptor agonists such as BIM23190; and apoptosis signal regulating kinase-1 (ASK-1) inhibitors. Examples of antihyperlipemic compounds include, but are not limited to, HMG-CoA reductase inhibitors such as pravastatin, simvastatin, lovastatin, atorvastatin, fluvastatin, rosuvastatin and pitavastatin; squalene synthase inhibitors such as compounds described in WO97/10224 (e.g., N-[[(3R,5S)-1-(3-acetoxy-2,2-dimethylpropyl)-7-chloro-5-(2,3-

dimethoxyphenyl)-2-oxo-1,2,3,5-tetrahydro-4,1-benzoxazepin-3-yl]acetyl]piperidine-4-acetic acid); fibrate compounds such as bezafibrate, clofibrate, simfibrate and clinofibrate; ACAT inhibitors such as avasimibe and eflucimibe; anion exchange resins such as colestyramine; probucol; nicotinic acid drugs such as nicomol and niceritrol; ethyl icosapentate; and plant sterols such as soysterol and γ-oryzanol. Examples of antiobestic compounds include, but are not limited to, dexfenfluramine, fenfluramine, phentermine, sibutramine, amfepramone, dexamphetamine, mazindol, phenylpropanolamine, clobenzorex; MCH receptor antagonists such as SB-568849 and SNAP-7941; neuropeptide Y antagonists such as CP-422935; cannabinoid receptor antagonists such as SR-141716 and SR-147778; ghrelin antagonist; 11β-hydroxysteroid dehydrogenase inhibitors such as BVT-3498; pancreatic lipase inhibitors such as orlistat and ATL-962; Beta-3 AR agonists such as AJ-9677; peptidic anorexiants such as leptin and CNTF (Ciliary Neurotropic Factor); cholecystokinin agonists such as lintitript and FPL-15849; and feeding deterrent such as P-57. Examples of the antihypertensive compounds include angiotensin converting enzyme inhibitors such as captopril, enalapril and delapril; angiotensin II antagonists such as candesartan cilexetil, losartan, eprosartan, valsartan, telmisartan, irbesartan, olmesartan medoxomil, tasosartan and 1-[[2'-(2,5-dihydro-5-oxo-4H-1,2,4-oxadiazol-3-yl)biphenyl-4-yl]methyl]-2-ethoxy-1H-benzimidazole-7-carboxylic acid; calcium channel blockers such as manidipine, nifedipine, nicardipine, amlodipine and efonidipine; potassium channel openers such as levcromakalim, L-27152, AL0671 and NIP-121; and clonidine.

5. KITS AND ARTICLES OF MANUFACTURE COMPRISING COMPOUND I

[0149] The present invention also relates to kits comprising a pharmaceutical composition according to the present invention comprising Compound I (and optionally one or more other antidiabetic compounds) where such kit further comprises instructions that include one or more forms of information selected from the group consisting of indicating a disease state for which the pharmaceutical composition is to be administered, storage information for the pharmaceutical composition, dosing information and instructions regarding how to administer the pharmaceutical composition. The kit may

also comprise packaging materials. The packaging material may also comprise a container for housing the pharmaceutical composition. The container may optionally comprise a label indicating the disease state for which the pharmaceutical composition is to be administered, storage information, dosing information and/or instructions regarding how to administer the composition. The kit may also comprise additional components for storage or administration of the composition. The kit may also comprise the composition in single or multiple dose forms.

[0150] In one embodiment, the pharmaceutical composition in the kit comprises multiple doses of a pharmaceutical composition according to the present invention wherein such pharmaceutical composition is a single dose form that comprises Compound I in one of the dosage ranges specified herein.

[0151] In another embodiment, the pharmaceutical composition in the kit comprises multiple doses of a pharmaceutical composition according to the present invention wherein such pharmaceutical composition is a single dose form that comprises Compound I and one or more of the other antidiabetic compounds specified herein.

[0152] The present invention also relates to articles of manufacture comprising a pharmaceutical composition according to the present invention comprising Compound I (and optionally one or more other antidiabetic compounds) where such articles of manufacture further comprise packaging materials. In one variation, the packaging material comprises a container for housing the composition. In another variation, the invention provides an article of manufacture where the container comprises a label indicating one or more members of the group consisting of a disease state for which the composition is to be administered, storage information, dosing information and/or instructions regarding how to administer the composition.

[0153] In one embodiment, the pharmaceutical composition in the article of manufacture comprises multiple doses of a pharmaceutical composition according to the present invention wherein such pharmaceutical composition is a single dose form that comprises Compound I in one of the dosage ranges specified herein.

[0154] In another embodiment, the pharmaceutical composition in the article of manufacture comprises multiple doses of a pharmaceutical composition according to the present invention wherein such pharmaceutical composition is a single dose form that

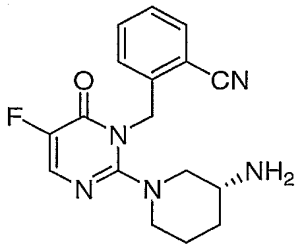
comprises Compound I and one or more of the other antidiabetic compounds specified herein.

[0155] It is noted that the packaging material used in kits and articles of manufacture according to the present invention may form a plurality of divided containers such as a divided bottle or a divided foil packet. The container can be in any conventional shape or form as known in the art which is made of a pharmaceutically acceptable material, for example a paper or cardboard box, a glass or plastic bottle or jar, a re-sealable bag (for example, to hold a "refill" of tablets for placement into a different container), or a blister pack with individual doses for pressing out of the pack according to a therapeutic schedule. The container that is employed will depend on the exact dosage form involved. It is feasible that more than one container can be used together in a single package to market a single dosage form. For example, tablets may be contained in a bottle that is in turn contained within a box.

[0156] One particular example of a kit according to the present invention is a so-called blister pack. Blister packs are well known in the packaging industry and are being widely used for the packaging of pharmaceutical unit dosage forms (tablets, capsules, and the like). Blister packs generally consist of a sheet of relatively stiff material (preferably stiff transparent plastic material) covered with a foil. During the packaging process recesses are formed in the stiff material. The recesses have the size and shape of individual tablets or capsules to be packed or may have the size and shape to accommodate multiple tablets and/or capsules to be packed. Next, the tablets or capsules are placed in the recesses accordingly and the sheet of relatively stiff material is sealed against the plastic foil at the face of the foil which is opposite from the direction in which the recesses were formed. As a result, the tablets or capsules are individually sealed or collectively sealed, as desired, in the recesses between the foil and the sheet. The strength of the sheet is preferably such that the tablets or capsules can be removed from the blister pack by manually applying pressure on the recesses whereby an opening is formed in the foil at the place of the recess. The tablet or capsule can then be removed via said opening.

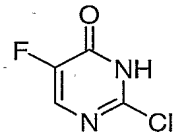
EXAMPLES

1. Preparation of 2-[[2-[(3*R*)-3-Amino-piperidinyl)-5-fluoro-6-oxo-6*H*-pyrimidinyl]methyl]-benzonitrile (Compound I) and pharmaceutically acceptable salts



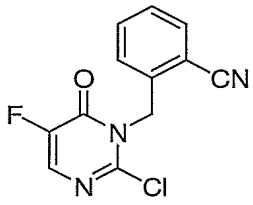
Compound I

2-Chloro-5-fluoro-3*H*-pyrimidin-4-one



[0157] 2,4-dichloro-5-fluoro-pyrimidine was stirred in THF (10 mL) with 1N NaOH (30 mL) at r.t. for 3h. The solution was made slightly acidic with 1N HCl and was extracted with $CHCl_3$. Organics were dried ($MgSO_4$) and concentrated *in vacuo*. Precipitation from 20% $CHCl_3$/hexanes and collection by filtration gave the title compound. ^{1}H NMR (400 MHz, DMSO-d_6): δ 13.98 (br s, 1H), 8.14 (d, 1H, J = 3.2 Hz).

2-(2-Chloro-5-fluoro-6-oxo-6*H*-pyrimidin-1-ylmethyl)-benzonitrile

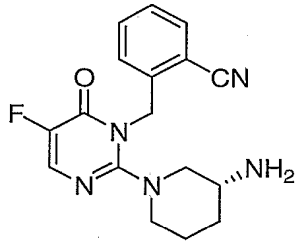


[0158] 2-chloro-5-fluoro-3*H*-pyrimidin-4-one was stirred in DME/ DMF under nitrogen at

0 °C. Sodium hydride was added in portions. After 10 min, lithium bromide was added and the reaction stirred for 15 min at r.t. α-Bromo-*o*-tolunitrile was added, and the reaction stirred at

65 °C for 8 h. The solution was diluted with EtOAc, washed with brine, dried ($MgSO_4$) and concentrated *in vacuo*. Purification by silica gel chromatography gave the title compound. ^{1}H NMR (400 MHz, $CDCl_3$): δ 7.81 (s, 1H), 7.74 (dd, 1H, J = 7.6, 1.2 Hz), 7.59 (td, 1H, J = 7.6, 1.2 Hz), 7.45 (t, 1H, J = 7.6 Hz), 7.15 (d, 1H, J = 7.6 Hz), 5.67 (s, 2H). MS (ES) [m+H] calc'd for $C_{12}H_7N_3OFCl$, 264, 266; found 264, 266.

2-[2-(3-(*R*)-Amino-piperidin-1-yl)-5-fluoro-6-oxo-6*H*-pyrimidin-1-ylmethyl]-benzonitrile (Compound I)

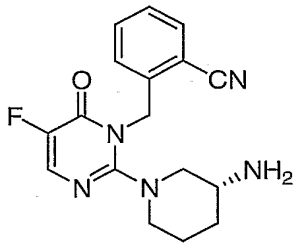


[0159] 2-(2-chloro-5-fluoro-6-oxo-6*H*-pyrimidin-1-ylmethyl)-benzonitrile, (*R*)-3-amino-piperidine dihydrochloride and sodium bicarbonate were stirred in ethanol at 60 °C for 90 min. The reaction was diluted with EtOAc, washed with water and brine, dried ($MgSO_4$), and concentrated *in vacuo*. Purification by silica gel chromatography gave the title compound. This was converted to the solid TFA salt by subjection to TFA in CH_2Cl_2 and concentration *in vacuo*. ^{1}H NMR (400 MHz, MeOD-d_4): δ 7.99 (d, 1H, J = 0.8 Hz), 7.85 (d, 1H, J = 7.2 Hz), 7.64 (t, 1H, J = 7.6 Hz), 7.47 (t, 1H, J = 7.6 Hz), 7.20 (d, 1H, J = 7.6 Hz), 5.33 (s, 2H), 3.49-3.58 (m, 1H), 3.10-3.19 (m, 1H), 2.68-2.76 (m, 2H), 2.48-2.58 (m, 1H), 1.60-1.80 (m, 2H), 1.41-1.51 (m, 1H), 1.10-1.19 (m, 1H). MS (ES) [m+H] calc'd for $C_{17}H_{18}N_5OF$, 328; found 328.

[0160] Compound I was also prepared from 2-(2-chloro-5-fluoro-6-oxo-6H-pyrimidin-1-ylmethyl)-benzonitrile as follows. A mixture of 2-(2-chloro-5-fluoro-6-oxo-6H-pyrimidin-1-ylmethyl)-benzonitrile (80.62 g, 0.31 mol), (*R*)-3-aminopiperidine dihydrochloride (58.00 g, 0.34 mol) and potassium carbonate (186 g, 1.35 mol) in 10% water in IPA (807 mL) was heated at 45 °C for 1 h. After cooling to room temperature, isopropyl acetate (807 mL) and 2 M HCl (807 mL) were added. Following phase separation, the organic layer was extracted with 2.0 M HCl (2 x 807 mL). The aqueous

extracts were combined, washed with isopropyl acetate (807 mL), cooled to 10 °C and the pH adjusted to 13 with caustic soda. The alkaline slurry was extracted with isopropyl acetate (2 x 807 mL), and the combined organic extracts concentrated to afford 93.50 g (93%, 98.4% AUC by HPLC) of Compound I as a viscous oil (93.49 g, 93%).

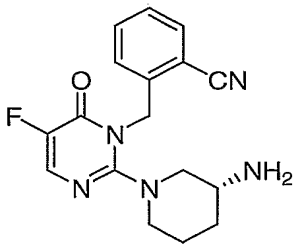
2-[2-(3-(*R*)-Amino-piperidin-1-yl)-5-fluoro-6-oxo-6*H*-pyrimidin-1-ylmethyl]-benzonitrile, HCl salt



• HCl

[0161] Compound I was prepared from the lyophilization of a solution of the free base in 0.5 N HCl. ^{1}H NMR (400 MHz, MeOD-d_4): δ 7.97 (d, 1H, J = 0.8 Hz), 7.85 (d, 1H, J = 7.2 Hz), 7.64 (t, 1H, J = 7.6 Hz), 7.47 (t, 1H, J = 7.6 Hz), 7.20 (d, 1H, J = 7.6 Hz), 5.39 (s, 2H), 3.56-3.62 (m, 1H), 3.43-3.51 (m, 1H), 3.10-3.23 (m, 2H), 2.90-3.00 (m, 1H), 2.02-2.12 (m, 1H), 1.60-1.84 (m, 3H). MS (ES) [m+H] calc'd for $C_{17}H_{18}N_5OF$, 328; found 328.

2-[2-(3-(*R*)-Amino-piperidin-1-yl)-5-fluoro-6-oxo-6*H*-pyrimidin-1-ylmethyl]-benzonitrile, tartrate salt



• tartrate

[0162] The tartrate salt of Compound I was prepared by adding a solution of *L*-tartaric acid in 5% water in IPA (3.00 L) to a solution of Compound I (93.00 g, 284 mmol) in methanol (982 mL) at 65 °C. The mixture was stirred for 20 min and then cooled to room temperature. The resulting precipitate was collected by vacuum filtration, washed with 5%

water in IPA (2 x 560 mL), and dried in a vacuum oven at 75 °C to give 112.78 g (77%, 100% AUC by HPLC) of the salt as a white solid.

[0163] The isolation and/or purification steps of the intermediate compounds in the above described process may optionally be avoided if the intermediates from the reaction mixture are obtained as relatively pure compounds and the by-products or impurities of the reaction mixture do not interfere with the subsequent reaction steps. Where feasible, one or more isolation steps may be eliminated to provide shorter processing times, and the elimination of further processing may also afford higher overall reaction yields.

2. Exemplary formulations comprising L-tartrate salt of 2-[[2-[(3*R*)-3-Amino-piperidinyl)-5-fluoro-6-oxo-6*H*-pyrimidinyl]methyl]-benzonitrile (L-tartrate salt of Compound I)

[0164] Provided are examples of capsule formulations that may be used to administer L-tartrate salt of 2-[[2-[(3*R*)-3-Amino-piperidinyl)-5-fluoro-6-oxo-6*H*-pyrimidinyl]methyl]-benzonitrile (L-tartrate salt of Compound I) according to the present invention. It is noted that the formulations provided herein may be varied as is known in the art.

[0165] Exemplary capsule formulations are as follows:

12.5mg of Compound I (weight of free base form) per capsule

(1) 2-[[2-[(3*R*)-3-Amino-1-piperidinyl]-5-fluoro-6-oxo-1(6*H*)-pyrimidinyl]methyl]-benzonitrile mono-L-tartrate	18.22 mg
(2) Lactose Monohydrate, NFr	48.91 mg
(3) Microcrystalline Cellulose, NFr	45.62 mg
(4) Croscarmellose Sodium, NF	6.25 mg
(5) Copovidone Ph Eur, JP	5.00 mg
(6) Magnesium Stearate, NF	1.00 mg
(7) White Opaque/White Opaque, Size 2 Capsules	1 capsule
TOTAL (per capsule)	125.00 mg

25mg of Compound I (weight of free base form) per capsule

(1) 2-[[2-[(3*R*)-3-Amino-1-piperidinyl]-5-fluoro-6-oxo-1(6*H*)-pyrimidinyl]methyl]-benzonitrile mono-L-tartrate	36.88 mg

(2) Lactose Monohydrate, NFr	97.37 mg
(3) Microcrystalline Cellulose, NFr	91.25 mg
(4) Croscarmellose Sodium, NF	12.50 mg
(5) Copovidone Ph Eur, JP	10.00 mg
(6) Magnesium Stearate, NF	2.00 mg
(7) White Opaque/White Opaque, Size 2 Capsules	1 capsule
TOTAL (per capsule)	250.00 mg

100mg of Compound I (weight of free base form) per capsule

(1) 2-[[2-[(3*R*)-3-Amino-1-piperidinyl]-5-fluoro-6-oxo-1(6*H*)-pyrimidinyl]methyl]-benzonitrile mono-L-tartrate 147.42 mg	
(2) Lactose Monohydrate, NFr	25.80 mg
(3) Microcrystalline Cellulose, NFr	18.56 mg
(4) Croscarmellose Sodium, NF	10.75 mg
(5) Copovidone Ph Eur, JP	10.75 mg
(6) Magnesium Stearate, NF	1.72 mg
(7) White Opaque/White Opaque, Size 2 Capsules	1 capsule
TOTAL (per capsule)	215.00 mg

200mg of Compound I (weight of free base form) per capsule

(1) 2-[[2-[(3*R*)-3-Amino-1-piperidinyl]-5-fluoro-6-oxo-1(6*H*)-pyrimidinyl]methyl]-benzonitrile mono-L-tartrate 294.84 mg	
(2) Lactose Monohydrate, NFr	51.60 mg
(3) Microcrystalline Cellulose, NFr	37.10 mg
(4) Croscarmellose Sodium, NF	21.50 mg
(5) Copovidone Ph Eur, JP	21.50 mg
(6) Magnesium Stearate, NF	3.46 mg
(7) White Opaque/White Opaque, Size 2 Capsules	1 capsule
TOTAL (per capsule)	430.00 mg

6. EFFECT OF ADMINISTRATION ON PLASMA DPP-IV ACTIVITY

[0166] Compound I was administered for 14 days to a population of newly-diagnosed type II diabetes patients at 12.5 mg/day, 25mg/day, 50 mg/day, 100mg/day, 200 mg/day and 400mg /day (based on the free base form of Compound I). Figure 1 illustrates the observed effect that administering Compound I has on a patient's plasma DPPIV activity. As can be seen from the data shown in Figure 1, by administering Compound I one time per day at the dosage levels specified herein, Compound I can be effectively used relative

to disease states where it is desired to reduce plasma DPPIV activity. In view of the data presented, it is believed that when at least 25mg of Compound I is administered to a patient, the patient's plasma DPPIV activity may be reduced by greater than 60% relative to baseline for a period of at least at least 6 hours, 12 hours, 18 hours and even 24 hours following administration.

7. EFFECT OF CO-ADMINISTRATION WITH PIOGLITAZONE ON PLASMA GLUCOSE

[0167] The effect of administering Compound I in combination with pioglitazone was investigated by measuring plasma glucose levels in mice. Male *db/db* (BKS.Cg-+$Lepr^{db}$/+$Lepr^{db}$) mice (6 weeks of age, CLEA Japan (Tokyo, Japan)) were divided into 4 groups (n=7 in each group) comprising Group A to Group D. Group A had free access to CE-2 powder chow (CLEA Japan) for 21 days. Group B had free access to CE-2 powder chow (CLEA Japan) containing 0.1% (w/w) of L-tartrate salt of Compound I for 21 days. The dose of Compound I in Group B was calculated to be 245.6±6.6 (mean ± SD) mg/kg body weight/day. Group C had free access to CE-2 powder chow (CLEA Japan) containing 0.0075%(w/w) of pioglitazone hydrochloride for 21 days. The dose of pioglitazone in Group C was calculated to be 17.7±0.6 (mean ± SD) mg/kg body weight/day. Group D had free access to CE-2 powder chow (CLEA Japan) containing 0.1% (w/w) of L-tartrate salt of Compound I in combination with 0.0075% (w/w) of pioglitazone hydrochloride for 21 days. The doses of Compound I and pioglitazone in Group D were calculated to be 230.4±6.7 (mean ± SD) mg/kg body weight/day and 17.3±0.5 (mean ± SD) mg/kg body weight/day, respectively. During 21 days of administration of the powder chow, there were not significant differences in the administration amount of the powder chow in the above 4 groups. After 21 days of administration of the powder chow, blood samples were taken from the orbital veins of the mice by capillary pipette under feeding condition, and plasma glucose levels were enzymatically measured by using Autoanalyzer 7080 (Hitachi, Japan).

[0168] The results are shown in Table 1. The values in the table means average (n=7) ± standard deviation.

Table 1

Group	Plasma Glucose (mg/dL)
Group A (control)	472.9 ± 74.6
Group B (Compound I)	412.4 ± 77.5
Group C (Pioglitazone)	394.4 ± 47.9
Group D (Compound I + Pioglitazone)	306.7 ± 103.1

[0169] As shown in Table 1, the combination of Compound I with pioglitazone showed excellent effects of lowering plasma glucose levels.

[0170] It will be apparent to those skilled in the art that various modifications and variations can be made to the compounds, compositions, kits, and methods of the present invention without departing from the spirit or scope of the invention. Thus, it is intended that the present invention cover the modifications and variations of this invention provided they come within the scope of the appended claims and their equivalents.

What is claimed is:

1. A method comprising:

administering a daily dose of between 5 mg/day and 300 mg/day of Compound I to a patient.

2. A method according to claim 1, wherein the daily dose of Compound I administered to the patient is between 10 mg and 250 mg.

3. A method according to claim 1, wherein the daily dose of Compound I administered to the patient is between 20 mg and 200 mg.

4. A method according to claim 1, wherein the daily dose of Compound I administered to the patient is between 25 mg and 200 mg.

5. A method according to claim 1, wherein the daily dose of Compound I administered to the patient is 12.5 mg.

8. A method according to claim 1, wherein the daily dose of Compound I administered to the patient is 25 mg.

7. A method according to claim 1, wherein the daily dose of Compound I administered to the patient is 50 mg.

8. A method according to claim 1, wherein the daily dose of Compound I administered to the patient is 75 mg.

9. A method according to claim 1, wherein the daily dose of Compound I administered to the patient is 100 mg.

10. A method according to claim 1, wherein the daily dose of Compound I administered to the patient is 150 mg.

11. A method according to any one of claims 1-10, wherein administering is performed 1 time per day.

12. A method according to any one of claims 1-10, wherein administering is performed 1 time per day as a single dosage.

13. A method according to any one of claims 1-10, wherein administering is performed 1 time per day for a period of at least 30 days

14. A method according to any one of claims 1-10, wherein administering is performed 1 time per day for a period of at least 60 days.

15. A method according to any one of claims 1-14, wherein administering is performed 1 time per day in the morning.

16. A method according to any one of claims 1-14, wherein administering is performed 1 time per day in the morning prior to a first meal of the day for the patient.

17. A method according to any one of claims 1-16, wherein administering is performed by a route selected from the group consisting of orally, parenterally, intraperitoneally, intravenously, intraarterially, transdermally, sublingually, intramuscularly, rectally, transbuccally, intranasally, liposomally, via inhalation, vaginally, intraoccularly, via local delivery, subcutaneously, intraadiposally, intraarticularly, intraperitoneally and intrathecally.

18. A method according to any one of claims 1-16, wherein administering is performed orally.

19. A method according to any one of claims 1-18, wherein administering is performed to treat type I or type II diabetes disease state of the patient.

20. A method according to any one of claims 1-18, wherein said patient has type II diabetes.

21. A method according to any one of claims 1-18, wherein said patient is prediabetic.

22. A method according to any one of claims 1-21, wherein administering comprises administering Compound I in combination with one or more antidiabetic compounds other than Compound I.

23. A method comprising:

administering a daily dose of Compound I to a patient in combination with one or more antidiabetic compounds other than Compound I.

24. A method according to any one of claims 1-23, wherein administering comprises administering Compound I in combination with one or more antidiabetic compounds selected from the group consisting of insulin signaling pathway modulators, compounds influencing a dysregulated hepatic glucose production, insulin sensitivity enhancers, and insulin secretion enhancers.

25. A method according to any one of claims 1-23, wherein administering comprises administering Compound I in combination with one or more antidiabetic compounds selected from the group consisting of protein tyrosine phosphatase inhibitors, glutamine-fructose-6-phosphate amidotransferase inhibitors, glucose-6-phosphatase inhibitors, fructose-1,6-bisphosphatase inhibitors, glycogen phosphorylase inhibitors, glucagon receptor antagonists, phosphoenolpyruvate carboxykinase inhibitors, pyruvate dehydrogenase kinase inhibitors, alpha-glucosidase inhibitors, inhibitors of gastric emptying, glucokinase activators, GLP-1 receptor agonists, GLP-2 receptor agonists, UCP modulators, RXR modulators, GSK-3 inhibitors, PPAR modulators, insulin, and α_2-adrenergic antagonists.

26. A method according to any one of claims 1-23, wherein administering comprises administering Compound I in combination with one or more antidiabetic compounds selected from the group consisting of GSK-3 inhibitors, retinoid X receptor agonists, Beta-3 AR agonists, UCP modulators, antidiabetic thiazolidinediones, non-glitazone type PPAR gamma agonists, dual PPAR gamma/PPAR alpha agonists, antidiabetic vanadium containing compounds and biguanides.

27. A method according to any one of claims 1-23, wherein administering comprises administering Compound I in combination with one or more antidiabetic compounds selected from the group consisting of (S)-((3,4-dihydro-2-(phenyl-methyl)-2H-1-benzopyran-6-yl)methyl-thiazolidine-2,4-dione, 5-{[4-(3-(5-methyl-2-phenyl-4-oxazolyl)-1-oxo-propyl)-phenyl]-methyl}-thiazolidine-2,4-dione, 5-{[4-(1-methyl-cyclohexyl)methoxy)-phenyl]methyl]-thiazolidine-2,4-dione, 5-{[4-(2-(1-indolyl)ethoxy)phenyl]methyl}-thiazolidine-2,4-dione, 5-{4-[2-(5-methyl-2-phenyl-4-oxazoly)-ethoxy)]benzyl}-thiazolidine-2,4-dione, 5-(2-naphthylsulfonyl)-thiazolidine-2,4-dione, bis{4-[(2,4-dioxo-5-thiazolidinyl)-methyl]phenyl}methane, 5-{4-[2-(5-methyl-2-

phenyl-4-oxazolyl)-2-hydroxyethoxy]-benzyl}- -thiazolidine-2,4-dione, 5-[4-(1-phenyl-1-cyclopropanecarbonylamino)-benzyl]-thiazolidine-2,4-dione, 5-{[4-(2-(2,3-dihydroindol-1-yl)ethoxy)phenylmethyl)-thiazolidine-2,4-dione, 5-[3-(4-chloro-phenyl])-2-- propynyl]-5-phenylsulfonyl)thiazolidine-2,4-dione, 5-[3-(4-chlorophenyl])-- 2-propynyl]-5-(4-fluorophenyl-sulfonyl)thiazolidine-2,4-dione,5-{[4-(2-(methyl-2-pyridinyl-amino)-ethoxy)phenyl]methyl}-thiazolidine-2,4-dione, 5-{[4-(2-(5-ethyl-2-pyridyl)ethoxy)phenyl]-methyl}-thiazolidine-2,4-dione, 5-([2-(2-naphthyl)-benzoxazol-5-yl]-methyl}thiazolidine-2,4-dione and 5-(2,4-dioxothiazolidin-5-ylmethyl)-2-methoxy-N-(4-trifluoromethyl-benzyl)benzamide, including any pharmaceutically acceptable salts thereof.

28. A method according to any one of claims 1-23, wherein administering comprises administering Compound I in combination with metformin, including any pharmaceutically acceptable salts thereof.

29. A method according to any one of claims 1-23, wherein administering comprises administering Compound I in combination with one or more sulphonyl urea derivatives.

30. A method according to any one of claims 1-23, wherein administering comprises administering Compound I in combination with one or more antidiabetic compounds selected from the group consisting of glisoxepid, glyburide, glibenclamide, acetohexamide, chloropropamide, glibornuride, tolbutamide, tolazamide, glipizide, carbutamide, gliquidone, glyhexamide, phenbutamide, tolcyclamide, glimepiride and gliclazide, including any pharmaceutically acceptable salts thereof.

31. A method according to any one of claims 1-23, wherein administering comprises administering Compound I in combination with one or more antidiabetic compounds selected from the group consisting of incretin hormones or mimics thereof, beta-cell imidazoline receptor antagonists, and short-acting insulin secretagogues.

32. A method according to any one of claims 1-23, wherein administering comprises administering Compound I in combination with insulin.

33. A method according to any one of claims 1-23, wherein administering comprises administering Compound I in combination with one or more GLP-1 agonists.

34. A method according to any one of claims 1-23, wherein administering comprises administering Compound I in combination with one or more GLP-2 agonists.

35. A method according to any one of claims 1-23, wherein administering comprises administering Compound I in combination with extendatide.

36. A method according to any one of claims 1-23, wherein administering comprises administering Compound I in combination with one or more antidiabetic compounds selected from the group consisting of repaglinide, mitiglinide and nateglinide, including any pharmaceutically acceptable salts thereof.

37. A method according to any one of claims 1-23, wherein administering comprises administering Compound I in combination with one or more alpha-Glucosidase inhibitors.

38. A method according to any one of claims 1-23, wherein administering comprises administering Compound I in combination with one or more antidiabetic compounds selected from the group consisting of acarbose, voglibose and miglitol, including any pharmaceutically acceptable salts thereof.

39. A method according to any one of claims 1-23, wherein administering comprises administering Compound I in combination with rosiglitazone, including any pharmaceutically acceptable salts thereof.

40. A method according to any one of claims 1-23, wherein administering comprises administering Compound I in combination with pioglitazone, including any pharmaceutically acceptable salts thereof.

41. A method according to any one of claims 1-23, wherein administering comprises administering Compound I in combination with metformin and pioglitazone, including any pharmaceutically acceptable salts thereof.

42. A method according to any one of claims 40 and 41, wherein the pioglitazone comprises pioglitazone HCl.

43. A method according to any one of claims 1-42, wherein Compound I is administered as a free base.

44. A method according to any one of claims 1-42, wherein Compound I is administered as a pharmaceutically acceptable salt.

45. A method according to any one of claims 1-42, wherein Compound I is administered as a tartrate salt.

46. A method according to any one of claims 1-42, wherein Compound I is administered as a hydrochloric acid salt.

47. A pharmaceutical composition formulated in a single dose form wherein such single dose form comprises between 5 mg and 300 mg of Compound I.

48. A pharmaceutical composition according to claim 47, wherein such single dose form comprises between 10 mg and 250 mg of Compound I.

49. A pharmaceutical composition according to claim 47, wherein such single dose form comprises between 20 mg and 200 mg of Compound I.

50. A pharmaceutical composition according to claim 47, wherein such single dose form comprises between 25 mg and 200 mg of Compound I.

51. A pharmaceutical composition according to claim 47, wherein such single dose form comprises 12.5 mg of Compound I.

52. A pharmaceutical composition according to claim 47, wherein such single dose form comprises 25 mg of Compound I.

53. A pharmaceutical composition according to claim 47, wherein such single dose form comprises 50 mg of Compound I.

54. A pharmaceutical composition according to claim 47, wherein such single dose form comprises 75 mg of Compound I.

55. A pharmaceutical composition according to claim 47, wherein such single dose form comprises 100 mg of Compound I.

56. A pharmaceutical composition according to claim 47, wherein such single dose form comprises 150 mg of Compound I.

57. A pharmaceutical composition according to any one of claims 47-56, wherein such single dose form further comprises one or more antidiabetic compounds other than Compound I.

58. A pharmaceutical composition formulated in a single dose form wherein such single dose form comprises Compound I and one or more antidiabetic compounds other than Compound I.

59. A pharmaceutical composition according to any one of claims 47-58, wherein such single dose form comprises one or more antidiabetic compounds selected from the group consisting of insulin signaling pathway modulators, compounds influencing a dysregulated hepatic glucose production, insulin sensitivity enhancers, and insulin secretion enhancers.

60. A pharmaceutical composition according to any one of claims 47-58, wherein such single dose form comprises one or more antidiabetic compounds selected from the group consisting of protein tyrosine phosphatase inhibitors, glutamine-fructose-6-phosphate amidotransferase inhibitors, glucose-6-phosphatase inhibitors, fructose-1,6-bisphosphatase inhibitors, glycogen phosphorylase inhibitors, glucagon receptor antagonists, phosphoenolpyruvate carboxykinase inhibitors, pyruvate dehydrogenase kinase inhibitors, alpha-glucosidase inhibitors, inhibitors of gastric emptying, insulin, and α_2-adrenergic antagonists.

61. A pharmaceutical composition according to any one of claims 47-58, wherein such single dose form comprises one or more antidiabetic compounds selected from the group consisting of GSK-3 inhibitors, retinoid X receptor agonists, Beta-3 AR agonists, UCP modulators, antidiabetic thiazolidinediones, non-glitazone type PPAR gamma agonists, dual PPAR gamma/PPAR alpha agonists, antidiabetic vanadium containing compounds and biguanides.

62. A pharmaceutical composition according to any one of claims 47-58, wherein such single dose form comprises one or more antidiabetic compounds selected from the group consisting of (S)-((3,4-dihydro-2-(phenyl-methyl)-2H-1-benzopyran-6-yl)methyl-thiazolidine-2,4-dione, 5-{[4-(3-(5-methyl-2-phenyl-4-oxazolyl)-1-oxo-propyl)-phenyl]-methyl}-thiazolidine-2,4-dione, 5-{[4-(1-methyl-cyclohexyl)methoxy)-phenyl]methyl]-thiazolidine-2,4-dione, 5-{[4-(2-(1-indolyl)ethoxy)phenyl]methyl}-thiazolidine-2,4-dione,

5-{4-[2-(5-methyl-2-phenyl-4-oxazoly)-ethoxy)]benzyl}-thiazolidine-2,4-dione, 5-(2-naphthylsulfonyl)-thiazolidine-2,4-dione, bis{4-[(2,4-dioxo-5-thiazolidinyl)-methyl]phenyl}methane, 5-{4-[2-(5-methyl-2-phenyl-4-oxazolyl)-2-hydroxyethoxy]-benzyl}- -thiazolidine-2,4-dione, 5-[4-(1-phenyl-1-cyclopropanecarbonylamino)-benzyl]-thiazolidine-2,4-dione, 5-{[4-(2-(2,3-dihydroindol-1-yl)ethoxy)phenylmethyl)-thiazolidine-2,4-dione, 5-[3-(4-chloro-phenyl])-2-- propynyl]-5-phenylsulfonyl)thiazolidine-2,4-dione, 5-[3-(4-chlorophenyl])-- 2-propynyl]-5-(4-fluorophenyl-sulfonyl)thiazolidine-2,4-dione,5-{[4-(2-(methyl-2-pyridinyl-amino)-ethoxy)phenyl]methyl}-thiazolidine-2,4-dione, 5-([2-(2-naphthyl)-benzoxazol-5-yl]-methyl}thiazolidine-2,4-dione and 5-(2,4-dioxothiazolidin-5-ylmethyl)-2-methoxy-N-(4-trifluoromethyl-benzyl)benzamide, including any pharmaceutically acceptable salts thereof.

63. A pharmaceutical composition according to any one of claims 47-58, wherein such single dose form comprises metformin, including any pharmaceutically acceptable salts thereof.

64. A pharmaceutical composition according to any one of claims 47-58, wherein such single dose form comprises a sulphonyl urea derivative.

65. A pharmaceutical composition according to any one of claims 47-58, wherein such single dose form comprises one or more antidiabetic compounds selected from the group consisting of glisoxepid, glyburide, glibenclamide, acetohexamide, chloropropamide, glibornuride, tolbutamide, tolazamide, glipizide, carbutamide, gliquidone, glyhexamide, phenbutamide, tolcyclamide, glimepiride and gliclazide, including any pharmaceutically acceptable salts thereof.

66. A pharmaceutical composition according to any one of claims 47-58, wherein such single dose form comprises one or more antidiabetic compounds selected from the group consisting of incretin hormones or mimics thereof, beta-cell imidazoline receptor antagonists, and short-acting insulin secretagogues.

67. A pharmaceutical composition according to any one of claims 47-58, wherein such single dose form comprises insulin.

68. A pharmaceutical composition according to any one of claims 47-58, wherein such single dose form comprises one or more GLP-1 agonists.

69. A pharmaceutical composition according to any one of claims 47-58, wherein such single dose form comprises one or more GLP-2 agonists.

70. A pharmaceutical composition according to any one of claims 47-58, wherein such single dose form comprises extendatide.

71. A pharmaceutical composition according to any one of claims 47-58, wherein such single dose form comprises one or more antidiabetic compounds selected from the group consisting of repaglinide, mitiglinide and nateglinide, including any pharmaceutically acceptable salts thereof.

72. A pharmaceutical composition according to any one of claims 47-58, wherein such single dose form comprises one or more alpha-Glucosidase inhibitors.

73. A pharmaceutical composition according to any one of claims 47-58, wherein such single dose form comprises one or more antidiabetic compounds selected from the group consisting of acarbose, voglibose and miglitol, including any pharmaceutically acceptable salts thereof.

74. A pharmaceutical composition according to any one of claims 47-58, wherein such single dose form comprises rosiglitazone, including any pharmaceutically acceptable salts thereof.

75. A pharmaceutical composition according to any one of claims 47-58, wherein such single dose form comprises pioglitazone, including any pharmaceutically acceptable salts thereof.

76. A pharmaceutical composition according to any one of claims 47-58, wherein such single dose form comprises metformin and pioglitazone, including any pharmaceutically acceptable salts thereof.

77. A pharmaceutical composition according to any one of claims 75 and 76, wherein the pioglitazone comprises pioglitazone HCl.

78. A pharmaceutical composition according to any one of claims 47-77, wherein such single dose form is adapted for oral administration.

79. A pharmaceutical composition according to any one of claims 47-77, wherein such single dose form is a solid formulation adapted for oral administration.

80. A pharmaceutical composition according to any one of claims 47-77 wherein such single dose form is a tablet or capsule adapted for oral administration.

81. A pharmaceutical composition according to any one of claims 47-77, wherein such single dose form comprises an extended release formulation adapted for oral administration.

82. A pharmaceutical composition according to any one of claims 47-82, wherein Compound I is present in the pharmaceutical composition as a free base.

83. A pharmaceutical composition according to any one of claims 47-82, wherein Compound I is present in the pharmaceutical composition in a pharmaceutically acceptable salt.

84. A pharmaceutical composition according to any one of claims 47-82, wherein Compound I is present in the pharmaceutical composition in a tartrate salt.

85. A pharmaceutical composition according to any one of claims 47-82, wherein Compound I is present in the pharmaceutical composition in a hydrochloric acid salt.

86. A kit comprising:

multiple doses of a pharmaceutical composition according to any one of claims 47-85; and

instructions which comprise one or more forms of information selected from the group consisting of indicating a disease state for which the pharmaceutical composition is to be administered, storage information for the pharmaceutical composition, dosing information and instructions regarding how to administer the pharmaceutical composition.

87. An article of manufacture comprising:

multiple doses of a pharmaceutical composition according to any one of claims 47-85; and

packaging materials.

88. An article of manufacture according to claim 87, wherein the packaging material comprises a container for housing the multiple doses of the pharmaceutical composition.

89. An article of manufacture according to claim 88, wherein the container comprises a label indicating one or more members of the group consisting of a disease state for which the compound is to be administered, storage information, dosing information and/or instructions regarding how to administer the composition.

90. A method for treating conditions mediated by DPP-IV, which comprises administering a therapeutically effective amount of Compound I in combination with one

or more antidiabetic compounds other than Compound I.

91. Use of Compound I in combination with one or more antidiabetic compounds other than Compound I for the manufacture of a pharmaceutical for treating conditions mediated by DPP-IV.

92. Use of Compound I for the manufacture of a pharmaceutical comprising a combination of Compound I and one or more antidiabetic compounds other than Compound I for treating conditions mediated by DPP-IV.

93. Use of one or more antidiabetic compounds other than Compound I for the manufacture of a pharmaceutical comprising a combination of Compound I and one or more antidiabetic compounds other than Compound I for treating conditions mediated by DPP-IV.

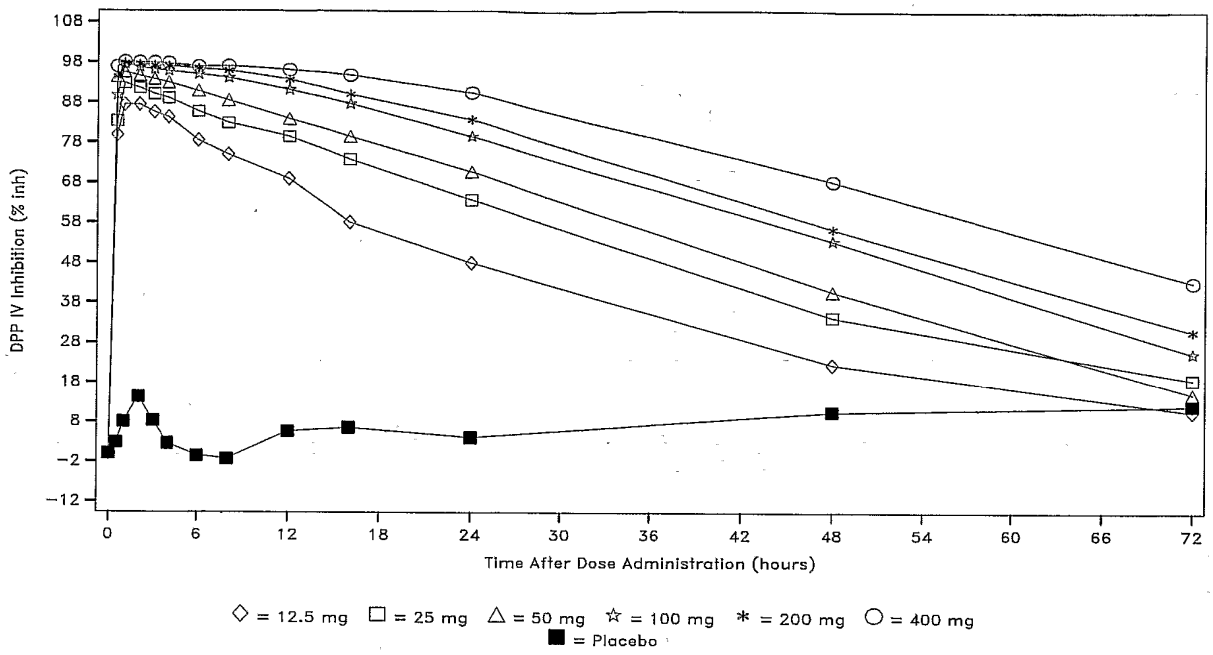
DPP IV inhibition after daily single oral administration of Compound I for 14 days in a newly-diagnosed type II diabetes patient population



INTERNATIONAL SEARCH REPORT

International application No
PCT/US2006/035707

A. CLASSIFICATION OF SUBJECT MATTER
INV. A61K31/513 A61K31/44 A61P3/10

According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)
A61K A61P

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practical, search terms used)
EPO-Internal, WPI Data

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category*	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
X	WO 2005/016911 A (SYRRX INC [US]; FENG JUN [US]; GWALTNEY STEPHEN L [US]; KALDOR STEPHEN) 24 February 2005 (2005-02-24) paragraphs [0243], [0258], [0309], [0318], [0323] example 30 -----	1-93

☐ Further documents are listed in the continuation of Box C.

☒ See patent family annex.

* Special categories of cited documents :

"A" document defining the general state of the art which is not considered to be of particular relevance

"E" earlier document but published on or after the international filing date

"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

"O" document referring to an oral disclosure, use, exhibition or other means

"P" document published prior to the international filing date but later than the priority date claimed

"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.

"&" document member of the same patent family

INTERNATIONAL SEARCH REPORT

International application No.
PCT/US2006/035707

Box II Observations where certain claims were found unsearchable (Continuation of item 2 of first sheet)

This International Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. [X] Claims Nos.: –
because they relate to subject matter not required to be searched by this Authority, namely:

Although claims 1-46, 90 are directed to a method of treatment of the human/animal body, the search has been carried out and based on the alleged effects of the compound/composition.

2. [ ] Claims Nos.:
because they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically:

3. [ ] Claims Nos.:
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

Box III Observations where unity of invention is lacking (Continuation of item 3 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

1. [ ] As all required additional search fees were timely paid by the applicant, this International Search Report covers all searchable claims.

2. [ ] As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.

3. [ ] As only some of the required additional search fees were timely paid by the applicant, this International Search Report covers only those claims for which fees were paid, specifically claims Nos.:

4. [ ] No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

Remark on Protest

[ ] The additional search fees were accompanied by the applicant's protest.

[ ] No protest accompanied the payment of additional search fees.
